LAND USE PLANS ZONING REGULATIONS

Guiding tool for the implementation
of land use plans in Rwanda

Edition 1

Kigali, Rwanda
November, 2022

LAND USE PLANS ZONING REGULATIONS

Guiding tool for the implementation of land use plans in Rwanda

FOREWORD

Central to the achievement of Rwanda's socio-economic transformation, is the optimal and efficient use of land. Given Rwanda's size, population growth and land use challenges, sustaining development progress relies heavily on efficient use of land resources. This justifies the great need for an integrated approach to land use planning and management at national, sectoral and local levels.

The Ministry of Environment through the National Land Authority (NLA) in collaboration with the Ministry of Finance and Economic Planning is taking necessary actions to mobilize efforts for developing Land Use Master Plans for all districts including urban and rural parts to achieve inclusive, integrative and sustainable development in the same regard.

Among major guiding instruments developed by The Government of Rwanda include its Vision 2050 developed in 2020, the Revised National Land Policy of 2019, the new Land Law of 2021, the National Land Use and Development Master Plan (NLUDMP) 2020-2050, the National Strategy for Transformation (NST1) for 2017-2024, the Participatory Land Readjustment Practical Guidelines of 2021 (Edition 1), the revised Kigali City Master Plan (KCMP) of 2020 and the District Land Use Plans (DLUPs) currently being elaborated for all Districts. All these Government instruments were established to guide the country's response to sustainable economic growth and sustainable land use and management.

In the framework of practically guiding the implementation of land use master plans is pleased to release these land use plan Zoning Regulations.

The objective of these Zoning Regulations is to provide a clear mechanism for the implementation of The Kigali City Master Plan (KCMP) and District Land Use Plans (DLUPs) and to direct public and private sector development to follow a clear set of development objectives, definitions, regulations, and guidelines that reflect the vision and concept proposed in the elaborated and approved Land Use Plans. The Zoning Regulations tabulate the land uses into three categories: Permitted, Conditional and Prohibited uses.

The development and publication of these Zoning Regulations is the results of the comprehensive work undertaken by the National Land Authority (NLA) / Land Use Management and Mapping Department in collaboration with MININFRA, MINALOC, MoE, RHA, The City of Kigali, Districts, academia, professional bodies and other Stakeholders. The custodians of effective implementation of these Zoning Regulations involve the City of Kigali and Districts, other implementing agencies, private sector and the community in general.

The NLA is requesting everyone implementing anything on land to follow these published land use zoning regulations.

Mrs. Espérance MUKAMANA
Director General and Chief Registrar of Land Titles
National Land Authority (NLA)

Date: 07 DEC 2022

1 OBJECTIVES, DEFINITION AND FOUNDING PRINCIPLES OF ZONING PLAN AND REGULATIONS

1.1 OBJECTIVE OF THE ZONING PLAN AND REGULATIONS

The objective of the **Zoning Regulations** is to provide a clear mechanism for the implementation of City of Kigali and District land use plans and to direct public and private sector development to follow a clear set of development objectives, definitions, regulations, and guidelines that reflect the vision and concept proposed in the Master Plans. The objectives, definitions and regulations ensure that development is carried out to achieve a logical, attractive, and livable development pattern in the Cities, safeguard privacy and amenities, and provide opportunities for growth, with enough flexibility to respond to changing business needs and development trends.

The regulations place an emphasis on encouraging mixed-use mixed-income development for integrated, well connected, inclusive, and equitable development that are sustainable and are designed to achieve quality living environment.

1.2 ZONING PLAN

Zoning regulates the types of uses, the development intensity, the required density, the setting, and height of buildings on any plot. As such, it serves as an effective planning tool to guide development in a logical and orderly fashion. The Zoning Plan is meant to provide landowners, developers, and stakeholders with a clear picture of what can and cannot be developed on any parcel of land. The Zoning Plan is made up of a Zoning Map and a set of Zoning Regulations. The Zoning Map identifies specific zones within the planning area based on the predominant land use, and the desired intensity, building height and density for that area.

The Zoning Regulations stipulate the permitted, conditional, and prohibited uses, location of a building on any plot, the overall maximum intensity, as well as the building height. Specific regulations related to overall building form, landscaping, development strategy and signage are also stipulated in the Zoning Regulations. Zoning Regulations stipulate allowable development for a zone, but flexibility in development is ensured by allowing incentives such as additional GFA, promoting inclusionary zoning, incremental / phased development.

The Zoning Regulations tabulate the uses into three categories: **Permitted, Conditional and Prohibited uses.**

Permitted Use: Uses that comply with the intended use for the zoning code and can be permitted outright. However, the development shall comply, when relevant, with other context specific additional regulatory restrictions such as Urban Design Guidelines, Overlays, Heritage, and Conservation guidelines.

Conditional Use: Conditional uses are usually activities that may create significant traffic, noise, or other impacts on the surrounding neighborhoods. Such identified uses can be permitted “conditionally” within a zone following the assessment of CoK and Districts’ One Stop Centre’s approval. OSC may require the development to confirm to a set of conditions and standards as per the regulations which must be met always. Each zone can allow different but compatible developments that are complementary in terms of use and scale. For example, a small-scale commercial development could be allowed in residential areas to provide convenience for residents to meet their daily shopping needs. Similarly, Civic facilities like schools, day care centers, religious facilities could be allowed in a residential zone, provided the facility meets the parking, noise standards etc. Such conditional uses could be permitted after careful consideration and evaluation by the One Stop Centre of CoK and Districts and may be subject to certain conditions as deemed necessary by the review committee, to ensure that the overall planning intention for any specific is not compromised.

Prohibited Use: These are uses that are deemed prohibited and include activities that have been found to be incompatible with the zone. For example, Heavy Industrial Uses are prohibited within the residential zones.

Overlay Zones: Within these Zoning Regulations, overlay zones provide more discretion and flexibility by allowing the City to protect certain areas as well as encourage or discourage certain types of development. Overlay Zones are mapped zones superimposed over the

established zoning and can be used to impose supplement restrictions, permit, or disallow various forms of density as well as provide bonuses and incentives to achieve the desired planning intent for that area. The parcels within the overlay zone will be thus subject to the regulations of the underlying zoning as well as the overlay zoning requirements. An overlay zone can cover more than one zone and even portions of several underlying zoning. The Steep Slope Overlay Zone, Urban Design Overlay, Heritage, and Conservation Overlay are example of Overlay Zones.

1.3 PRINCIPLE GUIDING THE ZONING REQUIREMENTS

1.3.1 Integrated Development and Urban Resiliency

The integrated approach to urban development promotes appropriate growth of Cities, ensure sustainable mobility, more cohesive communities, and a better environment. By looking at the City in a holistic fashion, it strengthens the urban resiliency, known as “the capacity of urban systems, communities, individuals, organizations, and businesses to recover maintain their function and thrive in the aftermath of a shock or a stress, regardless its impact, frequency or magnitude”. These Zoning Regulations enhance this approach and help to build the resilience, providing adequate tools and measures to guide the growth of the City as an urban system, where all components - infrastructural, institutional, economic, and social are taken into consideration.

1.3.2 Inclusivity and Community Involvement in the Planning

Inclusivity and equity in the planning and development process help create more sustainable cities with people getting the right to fully participate in every aspect of social, economic, political, and cultural life and voice their concerns and aspirations to create thriving neighborhoods and communities. All developments, shall consider the needs and aspirations of all groups, including vulnerable group and people of all abilities, in the design and implementation process. A participatory and bottom-up approach shall be followed involving and engaging the community in the design, development, and monitoring process.

1.3.3 Incrementality and Flexibility

The principle of incrementality is adopted in these Zoning Regulations to allow communities, investors, and developers to develop according to their current financial capacities. The objective is to create a flexible environment where all developments happen in an organic manner, without creating financial overexposure and hence hindering the affordability of the development. At the same time, the incremental approach is designed in such a way that future addition to the development would help achieving the desired density for the specific zone in future years.

Incremental development also allows developers to better adapt to current and future market conditions, thus reducing investment risk and facilitating access to the market to a larger segment of the population. Incremental development shall be an opportunity to limit ongoing informal development processes and ensure efficient provision of infrastructure and service delivery and rational land use.

1.3.4 Mixed Land Use

The zoning regulations allow and encourage Integrated and mixed-use development within all zones to create higher density, compact and vibrant places for people from all groups and neighborhoods. Neighborhoods shall showcase a blend of residential, commercial, cultural, public facilities, and micro-enterprises, that are accessible and well connected to transit system. This will enhance inclusivity, bring work closer to homes and reduce disparity and social segregation between different groups.

1.3.5 Pedestrian First

“Cities around the world are recognizing how essential walkability is for the access and health of their citizens, and the economic growth of their cities. All planners, designers and developers shall ensure walkable and integrated neighborhoods that links residences to the public facilities, commercial and recreational areas. The Master Plan provides for the city to expand its Non- Motorized Transport (NMT) network to cover the entire City for complete, continuous, and safe walkway and cycle way networks that provide clear protection

from motor vehicles and are accessible to people of all groups. Universal designs shall be adopted by removing all physical barriers and providing a safe route for smooth mobility and easy access.

1.3.6 Transit Oriented Development (TOD)

Transit-oriented development (TOD) presents as the best approach for Cities of Rwanda to continue keeping the private vehicle ownership on the low, and to avoid unsustainable, car-dependent, and sprawling settlement. TOD is necessary for inclusivity, equity, and long-term sustainability of the cities. The integrated and transit-oriented development bring people closer to activities, work, home, and public space, providing inclusive access for all, to Citywide opportunities and resources at the lowest financial and environmental cost, and with the highest resilience to climate change and other disasters. The City shall provide high-quality, safe, and reliable mass transit system for a sustainable, and equitable development. Mixed-use, integrated, and higher density developments that are well connected with easy walking and cycling connection, and in proximity to reliable transit service to the rest of the city are at the base of this master planning effort.

1.3.7 Sustainable Design

All developments shall be designed and developed with due regards for the environment, by incorporating environmentally friendly and sustainable design practices in both design and construction of the buildings. It shall be of paramount importance to encourage environmentally responsible buildings that are appropriate for the existing urban fabric. Subject to review and evaluation of developments in certain zones, and in line with GBMC, the CoK and Districts One Stop Centers may, at its discretion, grant increases in additional floor area, building height or building coverage for developments that adopt sustainable design technologies or techniques or provide additional benefit to the neighboring communities such as public spaces or recreational areas.

2 IDENTIFICATION OF LAND USE AND ZONING CATEGORIES AND SUB-CATEGORIES

HARMONIZED LAND USE CLASSIFICATION

The National Land Authority (NLA) is a government institution with the mission to ensure efficient land administration and use management for a sustainable development. In order to harmonise and standardise the land use master planning. This harmonized land use classification tool was adopted and published to guide going forward all **land use and development master plans including Kigali City, district land use plan clusters and land titling purposes.**

C1	C2	C3	C4	C5	C6	C7	C8

3 ZONING REGULATIONS

3.1 RESIDENTIAL ZONING

3.1.1 Low Density Residential Zone (R1)

General Description: The Low-Density Residential Zone (R1) is intended for villa and bungalow typology and complementary public facilities as needed. R1 Zones are limited to existing consolidated areas with the objective of limiting low-density urban development and encouraging compact development. **In all R1 Zones, R1A regulations are permitted.**

These regulations shall apply to:

- All new and redeveloped residential uses within the Low-Density Residential Zones (R1)
- Lots zoned or re-zoned for residential uses within the Low-Density Residential Zone (R1)

Table1: Low Density Residential Zone (R1)

	REGULATION
USES	
Permitted Uses	• Single family houses Home Occupation • Uses as per R1A regulations
Prohibited Uses	• Apartments • Industrial uses • Major infrastructure
Conditional Uses	• Semi-Detached • Restaurants, Guest houses, B&B, Hotels (incl. its ancillary uses) • Public facilities when suggested by Public Facilities Overlay • Commercial Retail Facilities when allowed by O-C2 Overlay • Accessory Residential Units
Ancillary Uses	• Car parking garage • Store and Service rooms Guard House
Lot Size	• Max 500 m2 • Plots less than 300 m2 shall follow R1A regulations • Existing developments on Plots larger than 500 m2 can retain their use.
COVERAGE	
Maximum Building Coverage	40% maximum
Minimum Landscaping Coverage	• 20% • 1% with Botanic Garden: Fruits and Vegetables
Maximum Floor Area Ratio (FAR)	• 0.5 maximum
DENSITY	
Single Use	10-15 Du/Ha
Mixed Use	• 7-10 Du/Ha (considering when building is partially occupied by other uses as per O-C2 overlay regulations))
BUILDING	

Maximum Number of Floors	- G+2+Penthouse - G (ancillary buildings)
Roof	Roof pitch shall be less than 30%. No reflective metal roofing shall be allowed, and roof colors should blend with the surrounding landscape
Floor to Floor Height	N/A (As per Building Code)
Building Form	Detached Semi Detached
DEVELOPMENT STRATEGY	
❖ Individual plot development ❖ Land subdivision ❖ Estate – No gated estates allowed on developments of more than 1 ha – see “General Provisions”	
SIGNAGE	
Permitted	- One sign located on the fencing wall along the front setback - A maximum of 35cm height x 35cm width of signage shall be permitted - Protrusion of the signage must be contained within plot boundary

PLAN
(Not to scale)

B1: Primary Building
B2: Ancillary Building
P1: Hard Paved Area
L1: Landsaped Area

R1 - Detached house

3.1.2 Low Density Residential Densification Zone (R1A)

General Description: The Low-Density Residential Densification Zone (R1A) is a residential zone for semidetached houses, single family townhouses, multifamily Houses, and low-rise developments. The R1A zone is intended to offer low and medium-rise housing and complementary commercial and public facilities as needed. The lot sizes in the R1A zone are smaller than in Low Density Residential Zones (R1), to distinguish the R1A zone as a higher density low rise residential neighbourhood. The purpose is to promote more efficient use of the lands in prime areas of the city or town by allowing for intensification and mix of uses of the existing low-density housing development.

These regulations shall apply to:

- All new and redeveloped residential uses within the Low-Density Residential Densification Zone (R1A)
- Lots zoned or re-zoned for residential uses within the Low-Density Residential Densification Zone (R1A)

Table 2: Low Density Residential Densification Zone (R1A)

	REGULATION
USES	
Permitted Uses	• Single family houses (all types) • Semi-detached houses • Multifamily Houses • Apartments • Townhouses • Row houses • Home Occupation
Prohibited Uses	• Industrial uses • Major infrastructure
Conditional Uses	• Restaurants, Guest houses, B&B, Hotels • Public facilities • Commercial Retail Facilities • Accessory Residential Units
Ancillary Uses	• Car parking garage • Store and Service rooms • Guard House
Lot Size	• Max. 300 m²
COVERAGE	
Maximum Building Coverage	• 50% maximum
Minimum Landscaping Coverage	• 20% • 1% with Botanic Garden: Fruits and Vegetables
Maximum Floor Area Ratio (FAR)	• 1.0 maximum
DENSITY	
Single Use	• 20-30 Du/Ha

Mixed Use	15-20 Du/Ha (considering when building is partially occupied by other uses as per O-C2 overlay regulations)
BUILDING	
Maximum Number of Floors	• G+2+P (Penthouse) • G (ancillary buildings)
Roof	Roof pitch shall be less than 30%. No reflective metal roofing shall be allowed, and roof colours should blend with the surrounding landscape.
Floor to Floor Height	N/A (As per Building Code)
Building Form	• Detached • Semi Detached • Attached
DEVELOPMENT STRATEGY	
❖	Individual plot development
❖	Land Pooling
❖	Land Subdivision
❖	Estate Development- No gated estates allowed on developments of more than 1 ha – see “General Provisions”
SIGNAGE	
Permitted	• One sign shall be located on the fencing wall along the front setback • A maximum of 35cm height x 35cm width of signage shall be permitted for Single Family Houses. • Larger signs are allowed for apartment complexes or housing clusters, subject to approval by One Stop Centre. • Protrusion of the signage must be contained within plot boundary

R1A – Attached house

R1A - Detached house

R1A - Semi-Detached house

3.1.3 Rural Residential Zone (R1B)

General Description: The Rural Residential Zone (R1B) is a residential zone offering compact developments in rural areas. The R1B Zone is intended to offer low rise housing as part of the farming community and complementary public facilities as needed.

The purpose is to create a sustainable and compact residential settlement in the rural settlement sites and the rural areas of the city, limiting encroachment towards the fertile agricultural land.

These regulations shall apply to:

- All new and redeveloped residential uses within the Rural Residential Zone (R1B)
- Lots zoned or re-zoned for residential uses within the Rural Residential Zone (R1B)
- Improvement Zones of existing built-up areas within the Rural Residential Zone (R1B)

Table 3: Rural Residential Zone (R1B)

REGULATION	
USES	
Permitted Uses	• Single family houses (all types) • Multifamily Houses (4 in 1, 8 in 1, etc. as per IDP Model Villages) • Apartments • Townhouses • Row houses • Home Occupation • All provisions of R2 (Improvement Residential Zones) • Accessory Residential Units
Prohibited Uses	• Industrial uses • Major infrastructure
Conditional Uses	• Restaurants, Guest houses, B&B, Hotels • Public facilities • Commercial Retail Facilities • Accessory Residential Units
Ancillary Uses	• Car parking garage Store and Service rooms • Guard House
Lot Size	• Max 150 m2 for Row Housing or Single-Family Units • Multifamily houses or Apartment development including additional rooms for rental shall be allowed, provided it meets the minimum density requirements.
COVERAGE	
Maximum Building Coverage	60% maximum
Minimum Landscaping Coverage	• N/A
Maximum Floor Area Ratio (FAR)	• 1.2 maximum
DENSITY	
Single Use	• 40-70 Du/Ha
Mixed Use	30-50 Du/Ha (considering when building is partially occupied by other uses as per O-C2 overlay regulations)
BUILDING	

Maximum Number of Floors	- G + 1 for single family houses - G+2 for all other typologies - G (ancillary buildings)
Roof	Roof pitch shall be less than 30%. No reflective metal roofing shall be allowed, and roof colours should blend with the surrounding landscape.
Floor to Floor Height	N/A (As per Building Code)
Building Form	- Detached Bungalows - Semi Detached Houses - Multifamily Houses - Rowhouses
DEVELOPMENT STRATEGY	
❖ Individual plot development ❖ Land Pooling ❖ Land Subdivision	

R1B - Row houses

R1B - 2in1 IDP

R1B - 4in1 IDP Project

3.1.4 Medium Density Residential - Improvement Zone (R2)

General Description: The Medium Density Residential - Improvement Zone (R2) is essentially planned for upgradation of unplanned settlements or redevelopment of urban renewal areas, wherever feasible in the brown field sites. Variety in the housing types and planned development is expected to stimulate the upgrading, redevelopment, and intensification of these housing areas. Its intent is to improve the overall physical and living conditions of the identified unplanned settlements through upgradation in the short term, and redevelopment through land assembly in the medium-long term, to better utilize the

developable land in prime areas of the city for creating integrated and affordable neighborhoods and provide adequate infrastructure and public facilities.

These regulations shall apply to:

- All new, upgraded, and redeveloped residential uses within the Medium Density Residential - Improvement Zone (R2)
- Lots zoned or re-zoned for residential uses within the Medium Density Residential - Improvement Zone (R2)

Table 4: Medium Density Residential - Improvement Zone (R2)

USES	REGULATION
Permitted Uses	• Row housing • Apartments • Home Occupation • Accessory Residential Units
Prohibited Uses	• Industrial uses • Major infrastructure • Single Family Residential Developments
Conditional Uses	• Restaurants • Hotels (Incl. its ancillary uses), Guest house, B&B • Public facilities, when allowed by public facilities overlay • Commercial retail, office facilities when allowed by O-0- C2 Overlay • Micro - Enterprise
Ancillary Uses	• Store and Service rooms
Lot Size	• Rowhouses: Max 200m2 • Low Rise Apartments: N/A (shall be allowed, provided the development meets the minimum density requirement)
COVERAGE	
Maximum Building Coverage	• 60% maximum
Minimum Landscaping Coverage	• 20% N/A • 1% with Botanic Garden: Fruits and Vegetables
Maximum Floor Area Ratio (FAR)	• 0.4 maximum
DENSITY	
Single Use	• 60-100 Du/Ha
Mixed Use	• 40-70 Du/Ha (considering when building is partially occupied by other uses as per O-C2 overlay regulations)
BUILDING	

Maximum Number of Floors	- G + 3 - One (1) extra floor may be allowed due to topographic conditions, to achieve the required density or to achieve technical or economic feasibility of the development - G (ancillary buildings)
Roof	- Roof pitch shall be less than 30%. - No reflective metal roofing shall be allowed, and roof colors should blend with the surrounding landscape.
Floor to Floor Height	- N/A (As per Building Code)
Building Form	- Rowhouses - Apartments (Low rise)
DEVELOPMENT STRATEGY	
Infrastructure Retrofitting or Improvement when existing living conditions are deemed suitable Infill Development on parcels that allow development and provided all parcels in the same bloc have minimum accessibility. Urban Renewal through land pooling/regularization when existing situation requires/allows for major interventions

3.1.5 Medium Density Residential - Expansion Zone (R3)

General Description: The Medium Density Residential - Expansion Zone (R3) is established to allow for intensification and redevelopment of peri-urban and green field areas through extensive housing strategies to provide variety of housing solutions. Implementation mechanisms shall be identified by District or City and Government Agencies to allow for the creation of economies of scale in the development of this Zone. While organized and properly trained labour force should be employed for the construction, self- construction shall be evaluated to cater for the lowest income segments of the population.

This zone is expected to stimulate development of low-cost incremental housing in special redevelopment or greenfield areas. The purpose of R3 zone is to facilitate the provision of housing dedicated to the low-income segment of the population, by providing low-rise, higher-intensity developments in green field sites of the City. To ensure mix of use and mix of income, several housing solutions are allowed.

The R3 Zones are in peri-urban areas, in close proximity to the proposed transit corridors, hence a minimum development quantum is required. **In all R3 Zones, R2 regulations are permitted.**

These regulations shall apply to:

- All new and redeveloped residential uses within the Medium Density Residential – Expansion Zone (R3)
- Lots zoned or re-zoned for residential uses within the Medium Density Residential – Expansion Zone (R3)

Table 6: Medium Density Residential – Expansion Zone (R3)

	Regulation
USES	
Permitted Uses	• Row houses • Apartments • Multifamily Houses • Accessory Residential units • Home Occupation
Prohibited Uses	• Single family houses • Industrial uses • Major infrastructure • Any development that does not meet affordability criteria suggested in these regulations
Conditional Uses	• Restaurants • Hotels/Guest houses (incl. its ancillary uses) • Public facilities • Commercial Retail, office, when allowed by O-C2 • Micro Enterprise
Ancillary Uses	• Store and Service rooms
Lot Size	• Max 100 m2 for incremental Single-Family Housing in new Subdivision Plans • Max 150 m2 for Row housing • N/A (Multifamily houses or Apartment development including additional rooms for rental shall be allowed, provided it meets the minimum density requirement)
Maximum Building Coverage	60% maximum
Minimum Landscaping Coverage	20%

	1% with Botanic Garden: Fruits and Vegetables
Maximum Floor Area Ratio (FAR)	1.2 maximum
DENSITY	
Single Use	60-90 Du/Ha
Mixed Use	40-70 Du/Ha
BUILDING	
Maximum Number of Floors	- G+3 - Extra floors may be allowed due to topographic conditions and any other reasons, to achieve the required density or to achieve technical or economic feasibility of the development
Roof	- Roof pitch shall be less than 30%. - No reflective metal roofing shall be allowed and roof colors should blend with the surrounding landscape.
Floor to Floor Height	- N/A (As per Building Code)
Building Form	- Attached for rowhouses - Attached/semi-detached/detached Apartments and Multifamily houses
DEVELOPMENT STRATEGY	
❖ Land Pooling ❖ Sites and Services ❖ Larger plots owned by individuals shall be developed following minimum required densities in an optic of incremental development	

Medium Density Residential – Expansion (R3)
Row houses

Medium Density Residential – Expansion (R3) Single Family Housing Type 1

Medium Density Residential – Expansion (R3) Single Family Housing Type 2

3.1.6 High Density Residential Zone (R4)

General Description: The High Density Residential Zone (R4) is established to create well planned medium-rise housing and apartment complexes with integrated commercial and public facilities, Eco-Tourism and Open Space (ET) etc. Minimum lot sizes in the High-Density Residential Zone (R4) are higher than the Medium Density Residential Zone (R3). This is to facilitate the creation of a well-planned high-density residential mixed-use neighborhood with green character. The Detailed Designs of the Project to be implemented in R4 is mandatory for easy technical assessment and decision making.

These regulations shall apply to:

- All new and redeveloped residential uses within the High-Density Residential Zone (R4)
- Lots zoned or re-zoned for residential uses within the High-Density Residential Zone (R4)

Table 7: High Density Residential Zone (R4)

	Regulation
USES	
Permitted Uses	• High Density Residential • Home Occupation • R2 typologies in case plot size is less than 750m²
Prohibited Uses	• Industrial uses • Major infrastructure
Conditional Uses	• Restaurants • Hotels (incl. its ancillary uses), Guest house, B&B

	- Public facilities, when allowed by public facilities overlay - Commercial retail, office, Micro-Enterprise when allowed by O-O-C2 Overlay - Micro - Enterprise
Ancillary Uses	- Car parking garage - Guard House - Store and service rooms
Lot Size	- Minimum: 750 m² - Plot smaller than 750 m can be developed following R2 regulations
Maximum Building Coverage	50% maximum
Minimum Landscaping Coverage	20% 1% with Botanic Garden: Fruits and Vegetables
DENSITY	
Single Use	90+n Du/Ha
Mixed Use	70+n Du/Ha (considering when building is partially occupied by other uses as per O-C2 overlay regulations)
BUILDING	
Maximum Number of Floors	G+n
Roof	Roof pitch shall be less than 30%. No reflective metal roofing shall be allowed and roof colors should blend with the surrounding landscape.
Floor to Floor Height	N/A (As per Building Code)
Building Form	- Attached Buildings - Detached Buildings R2 typologies for plots less than 750 m² in size
DEVELOPMENT STRATEGY	
❖	Land Pooling
❖	Project Documents and Designs
❖	Physical Plan, Sites and Services

Larger plots owned by individuals shall be developed following minimum required densities in an optic of incremental development	
CIRCULATION	
Pedestrian	- For large development sites with multiple apartment buildings: - Pedestrian circulation shall link all buildings and amenities on site and to Public Transport Network through NMT linkages. All pedestrian circulation shall be designed for universal accessibility.
SIGNAGE	
	- Two signs shall be permitted one along the fencing wall and the other within the front setback - A maximum of 1.5 m height x 7 m length of signage shall be permitted - Protrusion of the signage must be contained within plot boundary

High Density Residential Zone (R4) Detached Building

High Density Residential Zone (R4) Attached Building

3.2 COMMERCIAL AND MIXED USE

The regulations and guidelines in this section apply to mixed-use and commercial uses within the various Commercial Zones. The commercial zoning guidelines, with illustrative simulation are provided below.

3.2.1 Mixed Use Zone Commercial (C1)

The Mixed-Use Zone (C1) is a zone established to create high flexibility in the mix of uses and ensure continuity in the ground level commercial activities as well as provide employment opportunities in other floors such as offices or accommodation. This Zone offers spaces for goods and services as well as living quarters and rental units to create a vibrant mixed-use commercial zone.

These regulations shall apply to:

- All new and redeveloped commercial uses within the Mixed-Use Zone (C1)
- Lots zoned or re-zoned for commercial uses within the Mixed-Use Zone (C1)

Table 8: Mixed Use Zone (C1)

	REGULATION
USES	
Permitted Uses	• Commercial/Retail • Restaurants and Recreational activities • Office use above the 1st floor • Co-working spaces • Residential • Home Occupation
Prohibited Uses	• Large scale commercial complex • Industrial uses • Major infrastructure
Conditional Uses	• Public Facilities • Transportation Terminals • Hotels • Wholesale and warehousing • Garage and Parking • Petrol stations
Ancillary Uses	• Electrical substations (ESS)
Lot Size	Depending on the project to be developed
COVERAGE	
Maximum Building Coverage	• 60% maximum

Minimum Landscaping Coverage	10%
Maximum Floor Area Ratio (FAR)	•1.6 maximum
BUILDING	
Maximum Number of Floors	•G+4 maximum •Additional floors may be authorized by OSC along Wetland Front, and Green Connectors as per UD Plan •G (ancillary buildings)
Roof	•Attached Buildings •Detached Buildings
Floor to Floor Height	N/A
Building Form	•Attached Buildings •Detached Buildings
DEVELOPMENT STRATEGY	
❖	Individual plot development when minimum plot size, accessibility and parking requirements are met
❖	Infill development on available parcels or redevelopment of existing buildings
❖	Land Pooling plot subdivision allows for R2 regulation to be applied
CIRCULATION	
Pedestrian	•All buildings facing main commercial road/Public Transit Corridor/Wetland Front/Green Corridors shall provide a continuous well designed and universally accessible arcade of no less than 3m •No parking shall be allowed in this front setback •NMT linkages shall be identified to link all sites to the Public Transport Network. All pedestrian circulation shall be designed for universal accessibility.
Public transit	•Public Transport Network shall have bus stops spacing at a range of 300-500m
SIGNAGE	
Permitted	- Once Commercial sign per tenant shall be permitted: - Wall signage (15% of the Building Face or 9m² whichever less) - Window Signage (Transparent, 15% of the Building Face or 2.5m² whichever less) - Awning Signage (Min 2.5m clearance from ground and 25% of the building face or 2.5m² whichever less)

Prohibited	•The following signs are prohibited - Roof mounted signs - String lights, flashing, excessively bright lights Offsite signage
Location	•Individual signs for commercial tenants within a multi- tenanted commercial development shall be mounted to the façade of the development •Permitted free standing signage shall not exceed 5m in height, and may be located within the front setback
Lighting	No flashing lights are allowed

3.2.2 City Commercial Zone (C3)

General Description: is a Zone established to meet most of the retail, commercial and services needs for the larger community, and may include offices and entertainment activities. The lot size shall depending on the project to be developed for well-designed commercial buildings and to ensure that each development will be able to comply with C3 requirements.

These regulations shall apply to:

- All new and redeveloped commercial uses within the City Commercial Zone (C3)
- Lots zoned or re-zoned for commercial uses within the City Commercial Zone (C3)
- The Neighborhood Commercial Zone Overlay (O-C2)

Table 10: City Level Commercial Zone (C3)

	REGULATION
USES	
Permitted Uses	• Developments allowed in the C1 zone • Shopping centers • Offices • Hotels • Apartments • Leisure and entertainment centers (e.g. cinemas, bowling alleys) • Galleries • Education Institutions • Coworking spaces
Prohibited Uses	• Major Industrial Uses • Major Infrastructure Installations
Conditional Uses	• Public Facilities • Petrol stations • Transport Interchange • Wholesale and warehousing • Garage and Parking
Ancillary Uses	• Electrical substation • Refuse area
Lot Size	• Depending on the project to be developed
COVERAGE	
Maximum Building Coverage	•60% maximum
Minimum Landscaping Coverage	10%
Maximum Floor Area Ratio (FAR)	•2.4 maximum
BUILDING	
	• G+N

Number of Floors	• G (ancillary buildings) maximum
Floor to Floor Height	• Ground Floor - 5m maximum • Other Floors - 4m maximum
Building Form	Free standing attached or semi-detached buildings
DEVELOPMENT STRATEGY	
❖ Individual Plot	
❖ Land Pooling	
❖ Downzone to C1	
CIRCULATION	
Pedestrian	• All attached and semi-detached buildings facing main commercial roads / Public Transit Corridors/ wetland front/green corridors shall provide a continuous well designed and universally accessible arcade of no less than 5 m. • No parking shall be allowed in this front setback. • NMT linkages shall be identified to link all sites to the Public Transport Network. All pedestrian circulation shall be accessible to the disabled
Public transit	Public Transport Network shall have bus stops spacing at a range of 300-500m.
SIGNAGE	
Permitted	• One Building identification sign shall be permitted on the tower • One commercial sign per tenant shall be permitted: • Wall Signage (15% of the Building Face or 9 m² whichever less) • Window Signage (Transparent, 15% of the Building Face or 2.5m² whichever less) • Awning Signage (Min 2.5m clearance and 25% of the Building Face or 2.5m² whichever less) • Free standing Signage (Maximum 1.5 m height)
Prohibited	• The following signs are prohibited: • Roof mounted signs • Offsite signage

Location	- Individual signs for commercial tenants within a multitenanted commercial development shall be mounted to the façade of the development - Permitted free standing signage shall not exceed 5m in height, and may be located within the front setback
Lighting	No flashing lights are allowed

City Commercial Zone (C3) Detached Building

City Commercial Zone (C3) Attached Buildings
along BRT Corridor or Wetland

3.2.3 Regional Commercial zone (C4)

General Description: The regional commercial (C4) zone is established to stimulate economic development by allowing for a diversity of land uses in areas of the city that are accessible to regional transportation facilities and developed within planned commercial centers. Every effort shall be made to consolidate properties to encourage conformity and organized developments

The C4 zone is intended to provide for the conduct of business serving a regional area including primarily the retail sale of shopping goods and services and a variety of commercial and professional activities. It is further intended that these activities shall provide additional municipal revenue as well as business opportunities and employment opportunities for residents of the city.

The following criteria shall be considered in establishing and maintaining the C4 zone:

1. Need based on population of service area.
2. Convenient and efficient vehicular access from a freeway.
3. Availability of land suitable for grouping of related activities in sub centers with pedestrian circulation within such sub centers.
4. Location within the immediate vicinity of an existing regional center.

These regulations shall apply to all new and redeveloped commercial uses within the Regional Commercial zone (C3)

Table 8: Regional Commercial zone (C4)

USES	REGULATION
------	------------

Permitted Uses	• Developments allowed in the C1 zone • Shopping centers • Offices • Hotels • Apartments • Leisure and entertainment centers (e.g. cinemas, bowling alleys) • Galleries • Education Institutions • Coworking spaces
Prohibited Uses	• Major Industrial Uses • Major Infrastructure Installations
Conditional Uses	• Public Facilities • Petrol stations • Transport Interchange • Wholesale and warehousing • Garage and Parking
Ancillary Uses	• Electrical substation • Refuse area
Lot Size	N/A
COVERAGE	
Maximum Building Coverage	• 60% maximum
Minimum Landscaping Coverage	• 10%
Maximum Floor Area Ratio (FAR)	• 2.4 maximum
BUILDING	
Number of Floors	• G+N • G (ancillary buildings) maximum
Floor to Floor Height	• Ground Floor - 5m maximum • Other Floors - 4m maximum

Building Form	Free standing attached or semi-detached buildings
DEVELOPMENT STRATEGY	
❖ Individual Plot ❖ Land Pooling ❖ Downzone to C1	
Pedestrian	• All attached and semi-detached buildings facing main commercial roads / Public Transit Corridors/ wetland front/green corridors shall provide a continuous well designed and universally accessible arcade of no less than 5 m. • No parking shall be allowed in this front setback. • NMT linkages shall be identified to link all sites to the Public Transport Network. All pedestrian circulation shall be accessible to the disabled
Public transit	Public Transport Network shall have bus stops spacing at a range of 300-500m.
SIGNAGE	
Permitted	• One Building identification sign shall be permitted on the tower • One commercial sign per tenant shall be permitted: • Wall Signage (15% of the Building Face or 9 m² whichever less) • Window Signage (Transparent, 15% of the Building Face or 2.5m² whichever less) • Awning Signage (Min 2.5m clearance and 25% of the Building Face or 2.5m² whichever less) • Free standing Signage (Maximum 1.5 m height)
Prohibited	• The following signs are prohibited: • Roof mounted signs • Offsite signage
Location	• Individual signs for commercial tenants within a multitenant commercial development shall be mounted to the façade of the development Permitted free standing signage shall not exceed 5m in height, and may be located within the front setback
Lighting	No flashing lights are allowed

3.3 INDUSTRIAL

The regulations and guidelines in this section apply to industrial uses within the various Industrial Zones in the District.

3.3.1 Light Industrial Zone (I1)

General Description: The Light Industrial Zone (I1) is specialized land areas carefully located close to residential area with easy vehicular access to offer residents' proximity to a range of non-polluting industrial services. It is also established to create a clean and light industrial environment that could blend with the surrounding residential area.

I1 zone can have Clean Industries, Business Parks, Light Industries, or retail warehouses.

Implementation model for I1 should be based on small and medium private investment. It is recommended that a Land Subdivision Plan shall be approved before development may be authorized.

Clean Industries: *These are industries that do not generate air and water pollution and do not generate noise and smell nuisance which can affect surrounding developments. The factories also shall not use large quantities of hazardous substances such as solvents, acids, and other chemicals. No buffer is necessary for such industries.*

Light Industries: *These industries shall not generate large quantities of trade effluent or solid waste. They shall also not generate excessive impulsive or continuous noise. They shall also not use large quantities of hazardous substances such as solvents, acids & other chemicals. A buffer of 50m is necessary from the nearest residential Zone for such industries.*

Retail Warehouses: *These commercial activities typically are "stand alone" or "big box" developments that require larger lots. As both retail warehouses and light industrial functions are complementary, a development within the light industrial zone must operate as a single entity and subletting retail or warehousing activities are not allowed.*

Car Washes and Auto Repair Garages: *Car Washes and Auto Repair Garages are generally recommended to be established in Light Industrial zones. However, provided they meet specific requirements they can be conditionally allowed in Commercial and Mixed-Use Zones (included in C2 Overlay).*

Table 11: Light Industrial Zone (I1)

USES		Regulation
Permitted Uses		Non-pollutive industrial uses such as: • Agricultural processing plants • Industrial Bakeries • Food processing (except fish, dairy, poultry and meat products, sauerkraut, vinegar, yeast and rendering of fats and oils) • Light manufacturing and assembly • Wholesale and warehousing
Prohibited Uses		• Residential Uses • Major Infrastructure Installations
Conditional Uses		• Railroad yards and freight stations • Trucking yard or terminal • Concrete or stone products manufacturing plants • Grain milling • Treatment of wastewater • Workers' Accommodation • Grocery shop and small retail • Restaurants • Commercial Uses
Ancillary Uses		• Electrical substation (ESS) • Refuse area
Lot Size		• Minimum: 300 m² • Depending on the Light Industry Project
COVERAGE		
Maximum Building Coverage		• 60% maximum
Minimum Landscaping Coverage		• 10%
Maximum Floor Area Ratio (FAR)		• 1.2 maximum
BUFFER		No residential Areas from 50 m (Other Uses acceptable of Agriculture and Forest only)
BUILDING		
Number of Floors / Max Height		• G, G+3 • 15 m • 5 m (Ancillary building)
Building Form		• Detached Buildings (can also be flatted) or attached buildings
CIRCULATION		

Pedestrian	- Layout and design shall give due regard for safe pedestrian circulation throughout the site. - NMT linkages shall be identified to link all sites to the Public Transport Network. - All pedestrian circulation shall be accessible to the disabled
Public transit	Public Transport Network shall have bus stops spacing at a range of 300-500m.
SIGNAGE	
Permitted	- All signs shall - Be integrated into the design and theme of the building - Be wall mounted
Prohibited	- Multiple free-standing signage - Off-site signage
Location	Signs shall not obstruct views, vistas, or important landmarks
Lighting	Lighting shall be aesthetically pleasing and in keeping with the overall theme of the Zone

Light Industrial Zone (I1) Detached Buildings

Light Industrial Zone (I1) Attached Buildings

3.3.2 General Industrial Zone (I2)

General Description: The General Industrial Zone (I2) is specialized land areas strategically located close to expressways for easy access for heavy vehicles. As it is a zone that can generate noise, traffic, and pollutants, it is kept away from residential areas. It is established to create a consolidated industrial zone for employment in manufacturing and logistics industries, with imposed nuisance buffer for noise and health safety.

I2 zone can have General Industries or *Specialized Industries depending on their pollutive nature. Depending on the type of industry, different buffer requirements apply for General Industries.*

Table 12: General Industrial Zone (I2)

	REGULATION
USES	
Permitted Uses	• All uses allow in I1 – Light Industrial Zone • Batching and mixing plants, asphalt, cement and concrete • Manufacturing • Brewing or distilling of liquor • Building wreckers and house mover storage yards • Foundries • Manufacture of paper products • Storage of oil, gasoline or petroleum products in any quantity exceeding 3,500 Cubic Meters (m³) on any one lot or parcel of land • Structural steel fabrication
Prohibited Uses	• Residential Uses • Major Infrastructure Installations
Conditional Uses	• Heavy salvage, junk and auto wrecking yards • Electric power generating plants • Slaughterhouses • Workers' Accommodation • Grocery shop • Restaurants
Ancillary Uses	• Electrical substation (ESS) • Refuse area
Lot Size	• Minimum: 500 m² • Depending on the Industry Project
• COVERAGE	
Maximum Building Coverage	• 60% maximum
Minimum Landscaping Coverage	• 10%
Maximum Floor Area Ratio (FAR)	• N/A
BUFFER FROM THE NEAREST RESIDENTIAL AREAS	
General Industries refer appendix for General Industries	General Industries which are required to be 500 m away from the nearest residential areas.
Special Industries refer appendix for special Industries	Special Industries are required to have a larger buffer of 500 m from the nearest residential areas. However some more hazardous industries require larger buffers as specified by the national environmental authority.
BUILDING	
Maximum Number of Floors / Max Height	N/A

Building Form Existing Buildings	
SIGNAGE	
Pedestrian	Layout and design shall give due regard for safe pedestrian circulation throughout the site. NMT linkages shall be identified to link all sites to the Public Transport Network. All pedestrian circulation shall be designed for universal accessibility
Public Transit	Public Transport Network shall have bus stops spacing at a range of 300-500m.
SIGNAGE	
Permitted	- All signs shall - Be integrated into the design and theme of the building - Be wall mounted
Prohibited	The following signs are prohibited: - Roof mounted signs - Off-site signage
Location	Signs shall not obstruct views, vistas, or important landmarks
Lighting	Lighting shall be aesthetically pleasing and in keeping with the overall theme of the Zone

General Industrial Zone (I2)

3.3.3 Mining / Extraction and Quarrying Zone (I3)

General Description: The Mining and Quarry Industrial Zone (I3) is specialized land area identified within the District boundary for economic benefit.

The intent is to regulate *their use for sustainable extraction and restoration practices and to protect the environment and people from disaster and health risks.*

Table 13: Mining/Extraction and Quarrying Zone (I3)

	REGULATION
USES	
Permitted Uses	• Mining • Quarrying including clay extraction • Brick Kilns • Operations and Crushing Plants • Other mining related activities
Prohibited Uses	• Residential Uses • Commercial Uses • Major Infrastructure Installations
Conditional Uses	• Workers' Accommodation • Grocery shops • Canteens
Minimum Lot Size	• N/A
CONDITIONS	
Districts, Cities in collaboration with RMB and MoE, shall ensure that following conditions are met for all mining/quarrying activities: • The mining activities have no significant detrimental impact on the environment and/or appropriate mitigation and restoration measures are in place. • There is adequate capacity for onsite safe handling, operations and storage, as may be prescribed by MINICOM. • The vibration and noise level are controlled to protect residential areas surrounding the mining areas. • The extraction of minerals is carried out sustainably for economic benefits and proper restoration plans are in place. • No dust or smoke emitted shall be in violation of the pollution regulations (where available/applicable).	
BUFFER FROM THE NEAREST RESIDENTIAL AREAS	
• Mining and Quarrying Industries are required a buffer of 300m from the nearest residential areas or as may be specified by One Stop Centre (OSC). The buffer zone is dedicated to other land uses of Agriculture and Forest.	

BUILDING	
Maximum Number of Floors / Max Height	• N/A
Building Form	Detached Buildings

Public Transit	N/A
Permitted	• Multiple free-standing signage on all sides of the site
Prohibited	N/A
Location	• Signs shall not obstruct views, vistas, or important landmarks
Lighting	N/A

3.4 PUBLIC ADMINISTRATION ZONE (PA)

The regulations and guidelines in this section apply to Public Administrative and Services uses within the various government owned public administrative zones. This zone is designated for Public Administration and Services (PA) and shall only apply to lands owned by governmental agencies for public use or benefit. The PA zone applies to lands identified on the land use map as government offices or any other publicly owned properties as listed in the table below.

Other publicly owned lands not included within the PA zone shall be subject to the development standards of the zone in which they are located.

Whenever the public use in the PA zone ceases, or the plot affected by PA zone is sold to private individuals, such zone may be developed following Zoning Regulations of the neighboring areas without having to apply for zoning variation. In the case where several classes of zones are present near such parcel, OSC, at its discretion will establish which zoning regulations shall be applied.

Table 14: Public Administration and Services Zone (PA)

	REGULATION
USES	
Permitted Uses	• Government offices • Correctional and rehabilitation facilities • Defense and security uses

	• Fire station • Police station • Transport Interchange • Other public uses
Prohibited Uses	• Major industrial uses and warehouses • Major commercial uses • Public utility maintenance facilities with outdoor storage of materials and supplies
Conditional Uses	• Micro-enterprise • Commercial and retail Use
Ancillary Uses	• Electrical substation (ESS) • Refuse area • Storage
Minimum Lot Size	• N/A
COVERAGE	
Maximum Building Coverage	• N/A
Minimum Landscaping Coverage	• 20% minimum
Maximum Floor Area Ratio (FAR)	• N/A • Detailed Design of any structure would depend on the design standards of the implementing authority. • Massing, height, and setbacks should be consistent with the neighborhood in which the development take place
Existing building	N/A
BUILDING	
Maximum Number of Floors/ Max Height	N/A
Floor to Floor Height	N/A Refer to building code
Building Form	Free standing /Attached
CIRCULATION	
Pedestrian	• Layout and design shall give due regard for safe pedestrian circulation throughout the site. • NMT linkages shall be identified to link all sites to the Public Transport Network.

	All pedestrian circulation shall be designed for universal accessibility
Public Transit	Public Transport Network shall have bus stops spacing at a range of 300-500m.
SIGNAGE	
Permitted	- One Building identification sign shall be permitted on the frontage wall - Free standing Signage (Maximum 1.5 m height)
Prohibited	The following signs are prohibited: - Roof mounted signs - String lights, flashing, excessively bright lights - Offsite signage
Location	Permitted free standing signage shall not exceed 1.5m in height, and may be located within the front setback
Lighting	No flashing lights are allowed

3.5 PUBLIC FACILITIES (PF)

The regulations and guidelines in this section apply to Public Facilities provided for the wellbeing of the community within the various government owned or privately-owned lands

Public Facilities are shown in the Zoning Plan in two forms:

- As a Zone whenever such facilities are already existing, or their locations are confirmed.
- As an Overlay for future proposals suggesting most suitable locations to serve the relevant catchment area. Final location shall be consolidated at detailed design or Land Subdivision stage.

The Public Facilities Zones (PF) are established to clearly identify each category of public facilities provided for the community. These facilities provide basic and essential support services for the community at the city level, planning area level and at neighborhood level, depending on the type of facilities and the requirements of the community.

PF zones are subdivided in the following sub-zones:

- PF1 - Education and Research Facilities Zone
- PF2 - Health Facilities Zone
- PF3 - Religious Facilities Zone
- PF4 - Cultural/Heritage/Memorial Facilities Zone
- PF5- Sport and Leisure Facilities
- PF6 - Cemetery/Crematoria

These zones (except PF6- Cemetery/Crematoria) include only existing city/district level public facilities. Any future proposals for public facilities / modifications to existing public facilities shall follow the PF overlay guidelines to help identify specific locations as per demand and population. The exact locations of respective public facilities, once identified, shall then form a part of these zoning regulations and the zoning map.

3.5.1 Education and Research Facilities (PF1)

Table 15: Education and Research Facilities (PF1)

	REGULATION
Uses	
Permitted Uses	• All types of educational institutes • Research facilities
Prohibited Uses	• Industrial uses and warehouses • Major commercial uses • Public utility maintenance facilities with outdoor storage of materials and supplies • Cemeteries/crematoriums
Conditional Uses	• Canteens • Small commercial and retail use • Health centres and pharmacy • Accommodations for teachers, workers • Hostels/Dormitories/Residences
Maximum Lot Size	• University: 3ha • Secondary Schools: 1.5ha • TVET: 2ha • Primary Schools: 1ha • Nursery: 0.5 ha • ECD: 0.5 ha
COVERAGE	
Maximum Building Coverage	N/A

Minimum Landscaping Coverage	20% minimum
Maximum Floor Area Ratio (FAR)	- Detailed Design of any structure would depend on the design standards/guidelines of the Ministry of Education. - Massing, height, and setbacks should be consistent with the neighborhood in which the development take place
BUILDING	
Number of Floors	Minimum: G+1 (Except for ECD)
Floor to Floor Height	Depending on the Project Design
Building Form	Free standing /Attached
CIRCULATION	
Pedestrian	- Layout and design shall give due regard for safe pedestrian circulation throughout the site. - NMT linkages shall be identified to link all sites to the Public Transport Network. All pedestrian circulation shall be designed for universal accessibility.
Public Transit	Public Transport Network shall have bus stops spacing at a range of 300- 500m.
SIGNAGE	
Permitted	- One Building identification sign shall be permitted on the frontage wall - Free standing Signage (Maximum 1.5 m height)
Prohibited	The following signs are prohibited: - Roof mounted signs - String lights, flashing, excessively bright lights - Offsite signage
Location	Permitted free standing signage shall not exceed 1.5m in height, and may be located within the front setback
Lighting	No flashing lights are allowed

3.5.2 Health Facilities (PF2)

Table 16: Health Facilities (PF2)

	Regulation
Uses	
Permitted Uses	• All types of health facilities • Pharmacy
Prohibited Uses	• Industrial uses and warehouses • Major commercial uses • Public utility maintenance facilities with outdoor storage of materials and supplies • Cemeteries/crematoriums
Conditional Uses	• Canteens • Small commercial and retail use • Health centres and pharmacy • Accommodations for workers • Hostels/Dormitories/Residences
Maximum Lot Size	• Referral Hospital: 4ha • Provincial Hospital: 3ha • District Hospital: 2ha • Health Centre: 1 ha • Health Post: 0.06ha
Maximum Building Coverage	N/A
Minimum Landscaping Coverage	20% minimum
Maximum Floor Area Ratio (FAR)	• Detailed Design of any structure would depend on the design standards/guidelines of the Ministry of Health. • Massing, height, and setbacks should be consistent with the neighborhood in which the development take place
BUILDING	
Max Height	Minimum: G+1 (Except for Health Post)

Floor to Floor Height	N/A Refer to building code
Building Form	Free standing /Attached
CIRCULATION	
Pedestrian	Layout and design shall give due regard for safe pedestrian circulation throughout the site. NMT linkages shall be identified to link all sites to the Public Transport Network. All pedestrian circulation shall be designed for universal accessibility.
Public Transit	Public Transport Network shall have bus stops spacing at a range of 300- 500m.
SIGNAGE	
Permitted	One Building identification sign shall be permitted on the frontage wall Free standing Signage (Maximum 1.5 m height)
Prohibited	• The following signs are prohibited: • Roof mounted signs • String lights, flashing, excessively bright lights • Offsite signage
Location	Permitted free standing signage shall not exceed 1.5m in height, and may be located within the front setback
Lighting	No flashing lights are allowed

3.5.3 Religious facilities (PF3)

Table 17: Religious facilities (PF3)

	Regulation	Remarks
Areas	Urban	
Uses		
Permitted Uses	All types of Religious Facilities	
Prohibited Uses	• Industrial uses and warehouses • Major commercial uses • Public utility maintenance facilities with outdoor storage of materials and supplies	

	• Cemeteries/crematoriums	
Conditional Uses	• Accommodations for priests and operators • Accommodations for visitors and workers • Public facilities such as washrooms/changing rooms • Small commercial and retail use. • Dining halls • Education Services • Recreational facilities • Meeting Halls NB: Religious connected services and facilities will comply with high rise building (G+N)	
Lot Size	• 0.5 ha maximum	
COVERAGE		
Maximum Building Coverage	N/A	
Minimum Landscaping Coverage	40% minimum	
Maximum Floor Area Ratio (FAR)	Detailed Design of any structure would depend on the design standards / guidelines that maybe provided by the Rwanda Governance Board	
BUILDING		
Maximum Number of Floors / Max Height	G+N	
Floor to Floor Height	N/A Refer to building code	
Building Form	Free standing /Attached	
CIRCULATION		
Pedestrian	• Layout and design shall give due regard for safe pedestrian circulation throughout the site. • NMT linkages shall be identified to link all sites to the Public Transport Network. All pedestrian circulation shall be designed for universal accessibility.	

Public Transit	Public Transport Network shall have bus stops spacing at a range of 300-500m.	
SIGNAGE		
Permitted	• One Building identification sign shall be permitted on the frontage wall • Free standing Signage (Maximum 1.5 m height)	
Prohibited	The following signs are prohibited: • Roof mounted signs • String lights, flashing, excessively bright lights • • Offsite signage	
Location	Within the front setback	
Lighting	No flashing lights are allowed	

3.5.4 Cultural/Heritage/Memorial Facilities (PF4)

Table 18: Cultural/Heritage/Memorial Facilities (PF4)

	REGULATION
Uses	
Permitted Uses	• Cultural centers • Museums/heritage sites • Memorial sites
Prohibited Uses	• Industrial uses and warehouses • Major commercial uses
Conditional Uses	• Public utility maintenance facilities with outdoor storage of materials and supplies • Cemeteries/crematoriums • Accommodations • Public facilities such as washrooms • Small commercial and retail use. • Function halls
Minimum Lot Size	N/A

COVERAGE	
Maximum Building Coverage	N/A
Minimum Landscaping Coverage	N/A
Maximum Floor Area (FAR)	- Detailed Design of any structure would depend on the design standards /guidelines of the implementing authority. - Massing, height, and setbacks should be consistent with the neighbourhood in which the development take place.
BUILDING	
Maximum Number of Floors / Max Height	N/A
Floor to Floor Height	N/A Refer to building code
Building Form	Free standing /Attached
CIRCULATION	
Pedestrian	- Layout and design shall give due regard for safe pedestrian circulation through the site. - NMT linkages shall be identified to link all sites to the Public Transport Network - All pedestrian circulation shall be designed for universal accessibility.
Public Transit	Public Transport Network shall have bus stops spacing at a range of 300- 500m.
SIGNAGE	
Permitted	- One Building identification sign shall be permitted on the frontage wall - Free standing Signage (Maximum 1.5 m height)
Prohibited	The following signs are prohibited: - Roof mounted signs - String lights, flashing, excessively bright lights - Offsite signage
Location	Permitted free standing signage shall not exceed 1.5m in height, and may be located within front setback
Lighting	No flashing lights are allowed

3.5.5 Sport and Leisure Facilities (PF5)

General Description: The Sports and leisure facilities zone (PF5) is established to provide pitch and playgrounds for various sports categories

These regulations shall apply to all new and redeveloped sport facilities

Table 19: Sport and Leisure facility (PF5)

Areas	Regulation
USES	
Permitted Uses	• Sports Complexes • Pitches /playgrounds • Stadiums • Golf Courses • Recreational Clubs • Public Swimming Pools
Prohibited Uses	• All types of residential buildings • Major infrastructure installations
Conditional Uses	• Commercial establishments
Ancillary Uses	• Parking • Toilets
Minimum Lot Size	N/A
COVERAGE	
Maximum Building Coverage	60%
Minimum Landscaping Coverage	40%
Maximum Floor Area Ratio (FAR)	• Subject to evaluation and approval by competent entities
Additional Bonus Building Coverage	N/A
BUILDING	

Maximum Number of Floors	G+N Depending on international standards and guidelines
Building Form	N/A
Architecture	Architecture and Organic materials that are compatible with the natural landscape shall be used. Adherence to Green Building Minimum Compliance Guidelines

3.5.6 Cemetery/Crematoria (PF6)

These regulations shall apply to:

- All Cemetery/ Crematoria sites within the Public Facilities Zone (PF5)
- Lots zoned or re-zoned as Cemetery/ Crematoria sites within Public Facilities Zone (PF5)

Table 20: Cemetery/Crematoria (PF6)

	REGULATION
Uses	
Permitted Uses	- Cemetery - Crematoria - Other facilities such as pavilions, service rooms - Greening N.B: Permanent structures are not allowed.
Prohibited Uses	- All Industrial uses - All commercial uses - All Residential uses - Concrete Structures and Tiling Finishing (Under ground and Upper ground) - Public utility maintenance facilities with outdoor storage of materials and supplies
Conditional Uses	- Accommodations for caretakers - Public facilities such as washrooms

	• Prayer hall in crematoria
CIRCULATION	
Pedestrian	• Layout and design shall give due regard for safe pedestrian and traffic circulation throughout the site • All pedestrian circulation shall be accessible to the disabled
BUFFER	
Buffer Size	• If near wetland, an EIA should be conducted and should have a buffer distance of 200-300 m. • Uses allowed in the buffer shall be limited to Eco-Tourism and Open Space (ET) and Parks.

3.6 FOREST ZONE

3.6.1 Forest Plantation zone (F1)

Forest Zone (F1) are established to ensure sustainable land and resource management for sustainable economic development of the forests within the city towards health and well-being of the community. The intent is to conserve biodiversity and protect the ecological integrity of these nature areas for present and future generations, and to control from deforestation and encroachment against the purpose of designation of the area.

Forest Zone layer shall be updated periodically, and Forest Zone Regulations shall supersede other regulations if such regulations are in contrast with Forest Zone prescriptions.

These regulations shall apply to:

- All new and redeveloped forests within the Forest Zone (F1)
- Lots zoned or re-zoned for forest uses within the Forest Zone (F1)
- Any Developments in Forest zone require the approval by Ministry of Environment

Table 21: Forest plantation zone (F1)

	REGULATIONS
USES	
Permitted Uses	• Existing Forest to be retained Forestry / Eco-forestry • Forestry related research • Forest Plantation

Prohibited Uses	• All types of industrial uses • All types of residential uses • All types of commercial uses • All types of major public facilities • Major infrastructure installations
Conditional Uses	• Infrastructure • Small Scale Value Addition and Production Facilities • Botanical gardens, arboretums, and conservatories. • Hiking trails and bird watching platforms for environmental education and tourism • Outdoor recreational facilities, such as bicycle trails, greens, and commons, sitting areas and picnic areas. • Camping Sites • Park related public facilities such as public toilet/ changing room. • Construction Material Production • Bee Keeping

3.6.2 National Parks Zone

General Description: National Parks Zone (F2) are established to protect the national parks and its biodiversity towards sustainability, health, and well-being of the community. These parks can bring economic benefits through recreational, educational, and eco-tourism activities.

The intent is to preserve certain beautiful and significant areas, protect the ecological integrity of these nature areas for present and future generations, and to control from exploitation or encroachment against the purpose of designation of the area.

These regulations shall apply to:

- All new and redeveloped park uses within the National Parks Zone (F2)
- Lots zoned or re-zoned for park uses within the National Parks Zone (F2)

Table 22: National Park Zone (F2)

	Regulation
USES	
Permitted Uses	• Outdoor recreational facilities, such as sitting areas and picnic areas. • Hiking trails for environmental education and tourism

	• Park related public facilities such as public toilet/ changing room.
Prohibited Uses	• All types of industrial uses • Major residential uses • Major commercial uses • Major infrastructure installations
Conditional Uses	• Resorts / Hotels • Campsites • Restaurants/Kiosks • Small souvenir and grocery shops • Accommodation for workers
COVERAGE	
Maximum Building Coverage	• N/A
Minimum Landscaping Coverage	• N/A
Maximum Floor Area Ratio (FAR)	Detailed design and placement of any structure in the national park would depend on the design standards/guidelines of the implementing authority.

3.6.3 National Park expansion zone (F3)

The development will follow the specific local area plan to be developed by RDB

3.6.4 Natural forest zone (F4)

General Description: Natural forest zone (F4) is established to preserve identified undeveloped land /Eco-Tourism and Open Space (ET) in their natural state. It can include protected cultural areas and wildlife habitat or passive recreation like hiking or bird-watching.

The intent is to protect the ecological integrity of these nature areas from exploitation and encroachment. There are various benefits of natural Eco-Tourism and Open Space (ET). They promote peace, health, and wellbeing; increases the value of properties nearby; protects the area from flooding and allows for natural recharge of water supply; maintains biodiversity and protects significant archaeological/historical sites.

These regulations shall apply to:

- Lots zoned or re-zoned as Natural Forest zone

Table 23: National Forest zone (F5)

	Regulation
USES	
Permitted Uses	• Conservation Use • Recreational Trail • Forestry related research
Prohibited Uses	• All types of industrial uses • All types of residential uses • All types of commercial uses • All types of major public facilities • Major infrastructure installations
Conditional Uses	• Accessory structures necessary for conservation use, servicing, trail, viewing platform, any activity authorized by the Minister in charge of forest management.
CIRCULATION	
Pedestrian	• Layout and design shall give due regard for safe pedestrian circulation throughout the site. • Safe green linkages shall be identified with appropriate signages.
SIGNAGE	
Permitted	• All signs shall be integrated into the natural setting of the conservation area.

3.6.5 Afforestation zone (F5)

The hillsides and steep slopes are prone to natural hazards and they need to be protected. Unregulated and excessive encroachment on steep slopes can create environmental sensitive areas that are risky and dangerous and can diminish the views and natural features that resident's value.

The intent of the Afforestation zone/Steep Slopes zone (F5) is to protect steep slopes from unsustainable encroachment and exploitation. This zone is applicable on steep slopes above 55% in case of brownfield areas

Table 24: Afforestation zone (F5)

	Regulation
USES	
Permitted Uses	• Forests • Agro-Forestry • Bee Keeping • Perennial crops

Prohibited Uses	• All types of industrial uses • All types of residential uses • All types of commercial uses • All types of major public facilities • Major infrastructure installations
Conditional Uses	• N/A

3.7 ECO-TOURISM AND OPEN SPACE ZONE (ET)

Ecotourism Zone established to provide recreational facilities and activities in selected areas that have unique features (including visual corridors, environmentally sensitive areas, buffer areas, or along significant routes).

Ecotourism Zone mainly serves as promoting tourism while protecting the environment. Among the ecotourism principles are to minimize physical, social, behavioral, and psychological impacts; build environmental and cultural awareness and respect; provide positive experiences for both visitors and locals; and provide direct financial benefits for the locals, private industry, and for the conservation of the area.

Ecotourism is important because it helps protect the natural habitats and environment. It allows communities to build their economies without harming the environment.

These regulations shall apply to:

- All new and redeveloped park uses within the **Ecotourism, parks, and Open Space (ET)**
- Lots zoned or re-zoned for park uses within the **Ecotourism, parks, and Open Space (ET)**
- Buffer zones protected by the law as the public land

Table 25: Eco-Tourism and Open Space Zone (ET)

	REGULATION
USES	
Prohibited Uses	• All types of industrial uses • All types of residential uses • Commercial uses exceeding 150 m2 • All types of major public facilities • Major infrastructure installations

Permitted Uses	• Botanical gardens, arboretums, and conservatories. • Outdoor recreational facilities, such as hiking and bicycle trails, green spaces, and commons, sitting areas and picnic areas. • Park related public facilities such as public toilet/ changing room. • Recreational activities • Campground • Amusement facilities • Agro-tourism • Eco-tourism activities • Travel agencies • Arts and crafts centre • Souvenir and gift shops • Theaters, museums, and outdoor performance centers • Conference centres • Birdwatching, hiking, rafting, rock climbing, caving, swimming, kayaking. Sailing or bird watching. • Museums • Public Gathering • Eco-Lodge and Resorts • Temporally Structures
Conditional Uses	• Restaurants not exceeding 150 m2 whichever is less • Kiosks
COVERAGE	
Building coverage	• 30% when the lot size is greater than 0.5ha
BUILDING	
Maximum Number of Floors	• G+2 • G (ancillary buildings) maximum
CONDITIONS	Local Planning Authority may grant approval of developing above facilities, based on the following:

	• The development meets the minimum buffer requirement from the lake shore, as well as any other sector authority requirements as per law. • There is a need for the tourism facility within the area and is not conflicting with the public interest. • The location and development of the tourism facility is consistent with the health, safety and wellbeing of people residing or working in the neighborhood. • There are adequate infrastructure services such as utilities, access, parking required to support the proposed tourism facility.
--	--

3.8 AGRICULTURE AND LIVESTOCK

3.8.1 Agriculture Zone(A1)

Agricultural Zone (A) strives to protect the viability of agriculture in the city. The Agricultural zone is meant to prevent farmland from being converted to non-farm uses, to prevent the fragmentation of farms, and to prevent land-use conflicts, as well as to protect agricultural producers from nonfarm intrusion into agricultural areas. Development of Rural Communities is allowed in A Zone only after land pooling processes are actuated to consolidate agricultural land and identify suitable location for rural compact developments.

Table 27: Agricultural Zone (A1)

	REGULATION
USES	
Permitted Uses	• Crop farming • Agro-forestry • Green houses • Bee Keeping • Fish farming • Irrigation Facilities
Prohibited Uses	• All types of industrial uses not linked to Agro-Processing uses • All types of residential uses not linked to Farming activities • All types of commercial uses not linked to temporary farm store • All types of public facilities • All types of agriculture in water bodies buffer zones except agroforestry

Conditional Uses	• Facilities Supporting Agricultural uses • Temporary Farm store • Feeder roads Infrastructure • Drying facilities, stores, washing stations, agro-selling points • Livestock Farming
------------------	---

3.8.2 Livestock Zone (A2)

Livestock is a unique land use that does not easily fit into conventional zoning regulations. In simplistic terms, it is not a one-size-fits-all application. Factors such as the breed and number of animals, animal husbandry, topography and soils, farm management practices, proximity to Open Space versus residential development, the scale of the operation, forage and pasture management, diversity of livestock housing, and manure and nutrient management practices need to be considered when drafting zoning regulations for the raising of livestock.

Table 28: Livestock (A2)

	REGULATION
USES	
Permitted Uses	• Agro-forestry • All types of livestock farming • All types of livestock facilities • Temporary Farm store
Prohibited Uses	• All types of industrial uses • All types of commercial uses • All types of public facilities • Major infrastructure
Conditional Uses	• Afforestation on high slopes more than 55% (marginal land) • Artificial dams • Access roads • Agriculture • Temporally Camping

3.9 WETLAND

Wetland Zone is established to conserve the wetlands and protect ecological integrity of its environmentally sensitive areas from non-sustainable exploitation, for public health safety and for general welfare. The intent is to control and sustainably guide the use of wetlands and its environs for social, economic, and cultural purposes. Upcountry wetlands not yet have the detailed zoning plan but the City of Kigali has a Detailed Zoning Plan for the wetlands establishing areas for Conservation, Rehabilitation, Wise Use and Recreational areas. The following are the main objectives the Wetland Zoning Plan:

- To provide a clear direction to the enforcement agency to regulate activities within the wetlands.
- To streamline regulations for all wetlands, identifying areas of importance for their potential conservation or sustainable use;
- To ensure synergism between the zoning assigned to the wetlands and designated zoning of surrounding built environment as per ongoing Kigali Master Plan; and
- Identify strategic projects to be implemented within the wetlands and in synergy with the City of Kigali Implementation Plan.

The proposed Wetland Zoning Plan adopts an 'integrated approach' that promotes conservation and rehabilitation of wetlands on one side and encourages wise use of wetlands in alignment with national development vision of a green growth. Areas showing signs of a diverse wetland ecosystem that previously existed but are now under different uses, have been studied and their boundaries have been delineated as a Rehabilitation Zone. Planning intent behind creation of such zones is to re-establish a wetland ecosystem.

These regulation has classified Wetlands into six zones:

Upcountry wetlands without detailed master plan are classified into two categories:

1. W1A- Wetland-Protected zone(W1A)
2. W1B- Wetland-Unprotected zone(W1B)

CoK wetlands with a detailed master plan are classified into four categories:

3. W2 - Rehabilitation Zone
4. W3 - Sustainable Exploitation Zone
5. W4 - Conservation Zone
6. W5 – Recreational

3.9.1 Wetland-Protected zone (W1A)

These regulations shall apply to:

- All zoned and re-zoned areas as Wetlands Zone

Table 29: Wetland – Protected zone (W1A)

	REGULATION	REMARKS
USES		
Permitted Uses	• Research	

Prohibited Uses	• All types of Agriculture • All types of industrial uses • All types of residential uses • All types of commercial uses • All types of public facilities	
Buffer	• Wetlands buffer of 20m shall be maintained	

3.9.2 Wetland-Unprotected zone (W1B)

These regulations shall apply to:

- All zoned and re-zoned areas as Wetlands Zone (W)

Table 30: Wetland – Unprotected zone (W1B)

	REGULATION	REMARKS
USES		
Permitted Uses	• Agriculture • Fish Farming • Recreation • Ecotourism Development • Research • Energy Generation	
Prohibited Uses	• All types of industrial uses • All types of residential uses • All types of commercial uses • All types of public facilities	
Conditional Uses	• Recreational facilities such as, walkways, bicycle trails, greens, and commons sitting areas and picnic areas • Construction Material Production	Developments in W zone require approval by review panel of OSC

	<i>All activities in wetlands shall respect wetlands master plan's prescriptions if available</i>	
Buffer	. Wetlands buffer of 20m shall be maintained. But it is open for agriculture	

*The below guidelines are an extract of the **Kigali Urban Wetlands Master Plan** and this kind of study must be conducted in the upcountry districts.*

Zoning Regulations for the Kigali Urban wetlands would essentially serve as a guide for the authority to regulate various human interventions within wetlands. Therefore, most common interventions are grouped under six zoning parameters to frame the regulations. Such parameters are: (1) wise use; (2) structures; (3) fencing; (4) road access/crossing; (5) storm water drainage; (6) and waste management. These parameters are also representative of all the existing activities carried out in the wetlands.

3.9.3 Wetland-Rehabilitation Zone (W2)

Areas showing signs of a diverse wetland ecosystem that previously existed but are now under different uses, have been studied and their boundaries have been delineated as a Rehabilitation Zone. Planning intent behind creation of such zones is to re-establish a wetland ecosystem.

Table 31: Zoning regulations for Wetland–Rehabilitation zone (W2)

W2- Rehabilitation Zone	
Wise use	Predominant use: • Conditional and Prohibited uses shall conform to Zoning Land-use Matrix • Agriculture use and clay extraction to be phased out Ancillary use: • Pump sheds • Wells • Storage of agricultural produce
Structures	• Any structure constructed with organic building materials • Removal of existing structures including any foundations or below-ground installations irrespective of current usage

Fencing	• Fenceless
Infrastructure	• Roads and utility lines crossing and running parallel to wetlands are permissible provided it causes no obstruction to the natural drainage flow - • Elevated road crossings are recommended • Existing roads built at grade to be removed
Storm water drainage	• Prohibit direct discharge of storm water from industrial and agricultural areas into the wetland by creating artificial wetland within designated area within the wetland • Mandatory waste and effluent treatment for industrial areas • Prohibit use of pesticides in surrounding agricultural areas • Fill up drainage channels and ditches to the level of wetland surface • Construction of berms to re-distribute water and to prevent erosion
Waste management	• Prohibit direct wastewater discharge into the wetlands and minimize discharge locations • Plan piped sewage network and locate sewage treatments plants/artificial wetlands, for waste water treatment, outside wetland boundaries • Sewage Treatment Plants to include phosphorus removal (tertiary treatment) • Prohibit disposal and storage of any form of solid waste into the wetlands • Convert fish ponds into storm water detention ponds • Convert clay extraction basins into storm water detention basins

3.9.4 Sustainable Exploitation Zone (W3)

There are certain wetlands which are to be rehabilitated and their ecosystem improved, while retaining their existing economic/utilitarian/recreational value. It is recommended to follow sustainable practices while deploying resources offered by the wetlands. Such zones are delineated as Sustainable Exploitation Zone.

Table 32: Zoning regulations for Wetland–Sustainable Exploitation zone (W3)

W3- Sustainable Exploitation Zone	
Structures	• Any structure constructed with organic building materials provided it complies with EIA provisions • Removal of existing structures including any foundations or below-ground installations irrespective of current usage

Wise use	Predominant use: • Conditional and Prohibited uses shall conform to Zoning-Land-use Matrix • Agriculture use may continue provided it complies with EIA provisions Ancillary use: • Pavilions • Security post • Watch towers
Fencing	• Fenceless • In case fencing of certain properties is inevitable, 100% of fence height shall remain visually accessible and it shall not obstruct flow of storm water drainage to wetland
Infrastructure	• Roads and utility lines crossing and running parallel to wetlands are permissible • Permeable materials permitted for paved access roads/walkways • Use of man-made materials to be limited to support structures (foundations); superstructures (e.g. bridges) to be made from organic building materials if in- situ construction is involved
Storm water drainage	• Fill up drainage channels and ditches to the level of wetland surface • Construction of berms to re-distribute water and to prevent erosion
Waste management	• In situ treatment of organic waste is mandatory

3.9.5 Conservation zone (W3)

The wetlands which are still supporting significant areas of natural vegetation, where water is permanently present and that represent a valuable ecosystem, have been delineated as a Conservation Zone. Wetlands with these existing natural values are to be fully conserved.

Table 33: Zoning regulations for Wetland–Conservation zone (W3)

W4- Conservation Zone	
Structures	• Any structure to be constructed with organic building materials • Removal of existing structures including any foundations or below-ground installations irrespective of current usage

Wise use	Predominant use: • Conditional and Prohibited uses shall conform to Zoning-Land-use Matrix Ancillary use: • Pavilions • Security post • Watch towers
Fencing	• Fence without affecting natural stormwater drainage flow
Infrastructure	• Road and utility lines running parallel to wetlands is permissible • Existing roads built at grade to be removed
Stormwater drainage	• Prohibit direct discharge of stormwater from industrial and agricultural areas into the wetland by creating artificial wetland within designated area within the wetland • Mandatory waste and effluent treatment for industrial areas • Prohibit use of pesticides in surrounding agricultural areas • Fill up drainage channels and ditches to the level of wetland surface • Construction of berms to re-distribute water and to prevent erosion • Stormwater outlets to have an erosion control design so wetland is not impacted
Waste management	• Prohibit direct wastewater discharge into the wetlands • Relocate existing discharge locations with piped network • Relocate existing sewage treatment plants or any utility outside wetland • Prohibit disposal and storage of any form of solid waste into the wetlands

3.9.6 Recreational (W5)

Wetlands which offer potential to be developed as recreational spaces due to their proximity to strategic areas in the Kigali Master Plan have been identified as a Recreational Zone. There are certain wetlands which are currently under other uses that can be transformed with a focus on public Eco-Tourism and Open Space (ET), passive and active recreational uses and these are also delineated as W5.

Table 34: Zoning regulations for W5 – Recreational zone

W5- Recreational Zone	
Wise use	Predominant use: • Conditional and Prohibited uses shall conform to Zoning-Land-use Matrix Ancillary use: • Pavilions • Security post • Watch towers
Structures	• Any non-habitable structure constructed with organic building materials is permissible
Fencing	• Fence without affecting natural storm water drainage flow is permissible
Infrastructure	• Roads and utility lines crossing and running parallel to wetlands are permissible provided it causes no obstruction to the natural drainage flow • Elevated road crossings are recommended • Existing roads built at grade to be removed
Stormwater drainage	• Bio-swales are permissible
Waste management	• In situ treatment of organic waste permissible

3.10 WATER BODY ZONE

General Description: Waterbody Zone (WB) is established to conserve and protect the waterbodies and sustainably use them for all purposes. The intent is to protect and maintain the ecological balance of water bodies, to prevent from destruction of environment and pollution of water bodies, to preserve the scenic beauty of the City / town with controls on encroachment beyond the uses allowed in the area.

Table 30: Waterbody Zone (WB)

	Regulation	Remarks
These regulations shall apply to: • All rivers, lakes, and streams, canals, existing dams within the water body zone (WB)		
1.0 USES		

Permitted Uses	• Fish farming; • Fishing • Inland water transport • Tourism development • Recreations; • Boating/kayaking, • Rafting	
Prohibited Uses	• All types of industrial use and wastes • All types of residential use and wastes • All types of commercial use and wastes	
Conditional Uses	• Energy generation • Construction activities • Utility development • Mining (gas, petroleum, sands, quarries, minerals) • Diversion channel	Commercial activities in WB zone require approval by review panel

3.11 TRANSPORTATION

The Transport Zone is established to identify and locate major transport related areas including public transport services such as buses, airports, railway and depots associated with public transport uses, transport terminus, and cable car stations. No major zoning regulations are stipulated for purely transport related infrastructure developments, because the development or physical improvements proposed within these zones are developed by government agencies or authorities, who in turn, are already subject to specific safety requirements.

Table 31: Transport Zone (T)

	Regulation	Remarks
These regulations shall apply to areas zoned or re-zoned as:		
1.	Road Reserve(T1)	
2.	Bus terminals and stations(T2)	
3.	Airports, Ports and connected facilities(T3)	
4.	Railway and stations(T4)	

USES		
Permitted Uses	All transport infrastructure related to: • Road reserve and Railway • Bus terminals and stations • Airports-Ports and connected facilities • Parking area • Holding depots • Telecommunication lines, • Water network • Electrical infrastructures • Afforestation	
Prohibited Uses	• Major industrial uses • Major residential uses	
Conditional Uses	• Motor repair garage • Commercial uses if developed in conjunction with Transport Terminals and Interchanges • Petrol / Service stations • Selling points and office spaces • Hotels and Restaurants • Workers 'accommodation	
Assessment	• CoK and Districts shall verify all proposed transport projects to check there are no potential land use conflicts or negative impacts on the adjacent properties and environment that will result from the development of transport infrastructure facilities. • OSC and CoK or District's Department of Infrastructure shall jointly review proposals for transport related Infrastructure. • A separate committee (Review Panel) involving the organ in charge of activities underlined in the project (MININFRA, RTDA, RURA, etc) shall oversee and approve any infrastructure developments within the transport zone.	Development s in T zone require approval by review panel

3.12 PUBLIC UTILITY

The Utility Zone (U) in the Zoning Plan includes major utility infrastructure sites such as electrical substations and water reservoirs, water and sanitation treatment plants, data centers, drainage systems and their buffers, etc.

No major zoning regulations are stipulated for purely infrastructure developments because the physical improvements proposed within these zones are developed by government agencies or authorities, who in turn, are already subject to specific safety requirements (setbacks, etc).

Table 32: Utility Zone (U)

	REGULATION	REMARKS
These regulations shall apply to: • All infrastructure development within the Utility Zone (U)		
USES		
Permitted Uses	• Water infrastructure, Power Plants & Stations, Treatment Plants, Sewerage Treatment Plants, Waste & Sanitation Sites and transfer stations, Fire & Emergency stations, ICT and Telecommunication infrastructure	
Prohibited Uses	• Major industrial uses • Major commercial uses • All Residential uses in Electrical Utilities Zones	
Conditional Uses	• Materials storage yard • Workers 'accommodation	
Assessment	• Districts and CoK shall verify all proposed infrastructure projects to ensure that there are no potential land use conflicts or negative impacts on adjacent neighbors that will result from the development of infrastructure facilities. • Both OSC and Department of Infrastructure shall jointly review proposals for utility related Infrastructure. • A separate committee (review panel) involving relevant agencies (WASAC, REMA, RURA, REG, etc.) shall oversee and approve any infrastructure developments within the utility zone. Composition of the review panel may vary depending on the nature of the infrastructure.	Developments in U zone require approval by review panel

3.13 BUFFER ZONES

3.13.1 Wetland buffer zone

Wetland Buffer zones are established by Law (*Article 42 of Law Number 48/2018 of 12/08/2018 on Environment*) and are set to establish a minimum distance between developed areas and protected sites. In the case of wetlands, the buffer zone is set at 20 m. While all areas included within the official wetland boundary are automatically considered Public Domain, buffer zones can also be under private property. Although privately owned plots may be zoned by the Kigali Master Plan with different uses (commercial, residential), wetland buffer zones supersede any other regulations.

Plots that are partially affected by the buffer zone will be able to transfer Development Rights on that specific portion to the remaining developable part of the plot as prescribed by the CoK MP and District land use plans.

Table 33: Wetland buffer zone

Regulation	
USES	
Permitted Uses	The following are only permitted in <i>unprotected wetlands</i>: • Crop farming for unprotected wetland • Green houses • Fish farming • Agro-forestry • Tourism and conservation are crosscutting
Prohibited Uses	• All types of industrial uses • All types of commercial uses • All types of public facilities
Conditional Uses	• Livestock farming
Assessment	• CoK and Districts shall verify all proposed projects to check there are no potential negative impacts on the wetland and environment that will result from the development of permitted or conditioned developments. • Developments in Wetland buffer zone require approval by the organ in charge of activities underlined in the project while MoE, REMA shall oversee and approve any infrastructure developments within the wetland buffer zone.

3.13.2 Water body buffer zone

According to the Ministerial Order No.007/16.01 of 15/07/2010 determining the length of Land on shores of lakes and Rivers transferred to the Public Property

- Lakes to be protected by 50m buffer
- Some rivers to be protected by 10-meter buffer while other rivers have to be protected by 5- meter buffer and 2m buffer for unclassified rivers.

Table 34: Water body buffer zone

REGULATION	
USES	
Permitted Uses	• Fruit trees plantation • Agroforestry • Shrubs and grasses
Prohibited Uses	• Agrochemicals use • All types of industrial uses • All types of residential uses • All types of commercial uses • All types of public facilities • Major infrastructure
Conditional Uses	• Water treatment plant • Ecotourism, recreational parks, green spaces • Construction activities • Forest
Assessment	<i>Note that the institution responsible of the water management should be in the review panel</i> • CoK and Districts shall verify all proposed projects to check there are no potential negative impacts on the wetland and environment that will result from the development of permitted or conditioned developments. • Developments in Wetland buffer zone require approval by the organ in charge of activities underlined in the project while MoE, REMA, RWB shall oversee and approve any infrastructure developments within the water body buffer zone.

3.13.3 National Park buffer zone

National Park buffer zones are specific to each National Park of Rwanda. Refer to the following laws governing the National Parks of Rwanda.

PERMITTED USE: tourism, biodiversity conservation and forest use

3.13.4 Protected Area and Other Buffer zones (B4)

General description: The protected area refers to the zone that are considered as environmental sensitive or vulnerable due to specific hazards, vulnerabilities, or adverse events that represent threats to human safety, property, or the environment such as earthquakes

prone areas, flooding prone areas, landslides. etc. Whereas, Other buffer zone relates to other further observed buffers not specified in this document fore instances areas around mining activities, dumping activities and industrial parks where buffer zones are required to create suitable buffers. This buffer will also be used on natural and non-developable lands for other strategic considerations.

Regulations	
- The master plan has undertaken an assessment for establishing a proper buffer size for the buffer sizes. - District shall ensure proper studies and evaluations are carried out for the existing developments under the zone and places identified for relocation of the existing structure starting from poorly situated developments, over a fixed period. - District in collaboration with relevant stakeholder shall ensure there is adequate public awareness on preparedness, prevention, and response through early warning systems for the community who shall still staying in this zone. - Planning permit/approval from District shall be required for the use and development on vulnerable zone. District upon evaluation and in consultation with relevant stakeholders may allow developments that may be deemed necessary, provided it is demonstrated that any disturbance will be appropriately mitigated. - District in coordination with relevant stakeholders may facilitate TDR or offer incentive packages to motivate the property owners towards sustainable use and development on sensitive zones	
Permitted	
Forests green spaces and recreational parks	
Prohibited Uses	
Any Permanent Structure All types of industrial uses All types of residential uses All types of commercial uses All types of public facilities	
Conditional use	Remarks
- Agriculture - Infrastructure - Botanical gardens, arboretums and conservatories. - Outdoor recreational facilities, such as hiking and bicycle trails, greens and commons, sitting areas and picnic areas with non-habitation structures. - Park related public facilities such as public toilet/ changing room. - Small kiosk not exceeding 100 m2 - Open areas and play areas that are accessory to residential uses.	Only temporal and soft structure will be allowed Development shall be allowable in only 10% of the plot area or 500 m2 (which is lesser) Developments in P4zone require approval by review panel

Roads, parking, loading areas, and storage areas that are not subject to damage.	
REFURBISHMENT OF EXISTING STRUCTURE	
Any existing infrastructure, dwelling or settlement community in this area that need refurbishment either by: Refurbishment of existing buildings with structural alteration is not allowed with this this area, Refurbishment of existing buildings without structural alteration is not allowed but in some circumstances based on deep assessment of a review panel it is allowed for earthquakes zone when respecting to the Rwanda Building code.	

3.14 ZONING OVERLAY REGULATIONS

The Zoning Overlays set in this Regulations are:

- Neighborhood Commercial Zone Overlay (O-C2)
- Public Facilities Overlay
- Land Assembly Overlay
- Land Sub-Division Plan / Physical Plan Overlay
- Local Sectoral Development Master Plan Overlay
- Urban Design Overlay
- Airport Restriction Area Overlay
- Slope (30-55%) Overlay
- Nature Restoration Overlay
- Tourism Promotion Overlay
- Heritage Conservation and Promotion Overlay
- Buffers Overlay
- Natural Disaster Risk Overlay

The provisions of this section (3.14) apply to proposed land uses and development in addition to all other applicable requirements stipulated in the Zoning Regulations. An overlay zone applies additional or stricter conditions and criteria to those of the underlying zoning. The overlay zone may share common boundaries with the base zone or cut across base zone boundaries. In some cases, the overlays are not identified with any specific zone due to the need to locate in the areas that best serve the community based on the population and demand. In such cases, the exact locations of the uses shall be identified based on the criteria/conditions specified under the overlays before they are identified with any specific zoning ordinances.

3.14.1 Neighborhood Commercial Zone Overlay (O-C2)

General Description: The Neighborhood Commercial Zone Overlay (O-C2) within residential zones creates attractive establishments and such developments along minor arterial and collector roads allow for compact and active mixed-use developments with a commercial frontage. The intent of this overlay is to maintain and enhance the vitality of neighborhood, provide compatible services near one another, and allow diverse uses, based on the demand.

This integrated and compact development pattern of neighborhood creates a walkable and transit friendly environment. The C2 Overlay also allows for small-scale, affordable commercial solutions at the neighborhood level. The Neighborhood Commercial Zone Overlay (O-C2) is applicable to URBAN and RURBAN Areas but not applicable to Rural settlement sites.

These regulations shall apply to:

- All new and redeveloped mixed uses within the Residential Zones
- Lots zoned or re-zoned for mixed uses within the Residential Zones

Table 35: Neighborhood Commercial Zone Overlay (O-C2)

		REGULATION
USES		
Permitted Uses	• Neighborhood level Commercial retail • Retail • Offices • Hotels, restaurants, B&B, etc • Micro-Enterprise	
Prohibited Uses	• All types of industrial uses • Large scale commercial uses such as shopping centres, hypermarkets, showrooms, etc. • Major infrastructure	
COVERAGE		
Maximum Floor Area Ratio (FAR)	• 1.4 maximum – supersedes Residential Maximum FAR for R1, R1A, R2 and R3 zones. • R4 zones retain FAR as per respective regulations.	
CONDITIONS		

- The neighborhood level mixed-use developments shall be allowed along the minor arterials and collector roads, based on the initiative of the land owner / developer.
- These developments shall be allowed within a 30-meter buffer area from the minor arterials and collector roads' edges.
- One (1) additional floor may be authorized by CoK or District OSC in R1B, R2 and R3 zones provided the conditions in point below are met.
- CoK or Districts shall grant approval of mixed use developments within residential areas, provided the location of such developments is not inconsistent with the privacy, accessibility and safety of people residing or working in the neighborhood.
- Refer to overlay plan

3.14.2 Public Facility Overlay

The Public Facilities Overlay is not a prescriptive regulation. It serves as indication for District - One Stop Centre in identifying most suitable and optimal location of Public Facilities, based on proposed land use distribution and population density. Exact location of Public Facilities shall be identified in Land Subdivision Plans following the standards prescribed in these Regulations.

The Public Facilities overlay is established to provide for a range of public facilities that are required by the community at neighborhood, planning area and at city level. These facilities provide basic services and essential support services for the community. They are generally not identified within any specific zone, due to the need to locate in areas that best serve the community and based on population and demand.

The public facilities overlay help in identifying the locations for future proposals of each public facility category. The locations of respective public facilities, once identified, shall form a part of the zoning map and actual zoning regulations stipulated under section 2.5 Public Facilities Zone (PF).

Table 36: Public Facilities Overlay

Regulation	
This regulation shall apply to: • All future proposals / modifications to existing public facilities within the city	
Conditions/Assessment	Remarks

• This overlay covers all uses that are stipulated under section 3.5 Public Facilities Zone (PF). • All neighborhood level facilities shall be preferably placed within the established Public Facility Zone and/or within 400m walking radius in residential and mixed-use neighborhoods, based on population and demand. • All public facilities provision shall follow the planning standards stipulated in this regulation. • Any application for modifications to an existing public facility shall be reviewed by the District, in consultation with the community. ❖ District may grant approval of developing public facilities, based on the following: • There is a need for the public facility within the neighbourhood/planning area / city level and is not conflicting with the public interest. • The public facility is consistent with the goals and policies of the general plan, and applicable planning standards. • The location and development of the public facility is consistent with the health, safety and wellbeing of people residing or working in the neighborhood. • There are adequate infrastructure services required to support the public facility, such as utilities, access, parking, etc.	Refer public facilities overlay plan
PLANNING STANDARDS	
Below the recommended plot sizes for adequate planning. Plots size for each public facility may be smaller or greater than the one listed in this table if: 1) The facility's catchment area is smaller or greater than the one identified in these standards and the users will be proportionate to the available plot size. In this case, an assessment of the expected catchment population or expected users of the facility shall be provided by the developer; 2) Topographic conditions or neighborhood urban fabric or cadastral structure in the neighborhood do not allow for larger plots but there is a clear need for the facility in the area. In this case the facility should meet the criteria listed in point a) above on proportionate size. 3) It meets safety requirements as established by relevant laws; 4) It meets minimum parking requirements – parking requirements shall be reduced if the facilities are less than 500 m from Public Transport stops;	

5) Do not cause nuisance or disruption to the neighborhood in terms of height, traffic, landscape or environmental context. 6) It is an existing facility that is already operating to the benefit of the community. In this case, mitigation measures might be identified, if needed or requested by District / City OSC for the facility to continue operations.		
Type	Standards	
Educational Facilities	• Primary School – 1 per Neighborhood (15,000- 20,000 population);1ha site • Secondary School – 1 per 20,000 -25,000 population; 1.5 ha site • Primary + Secondary School (combined) – 2.8 ha site (depending on existing school sites) • Vocational /ICT Institute – 1 per Planning Area; 2 ha site • Higher Education Institute – 1 per 500,000 population minimum; 3 ha site • Combine (All): 9 ha site	
Health Facilities	• Health Post – 0.06 ha • Health Centre – 1 per Neighborhood (15,000- 20,000 population); 0.2 ha site • District Hospital – 2 ha site • Provincial Hospital – 1 per Province; 3 ha site • Referral Hospital – 4 ha • site	
Religious Facilities	• 1 per Neighborhood (15,000-20,000 population); Minimum 0.5ha site	
Cultural Facilities	• Community Hall – 1 per Neighborhood; 0.5 ha site • Regional Library – 1 per 500,000 populations; 0.5 ha site • Museums, Cultural Centre etc. – 1 per Planning Area; 1.5ha site • Neighborhood Centre – 1 per Neighborhood (15,000- 20,000 population);1.2 ha site	

	• Neighborhood Park – 1 per Neighborhood (15,000-20,000 population); 1.0 ha site	
Cemetery and Crematorium	• Cemetery – 10 ha site per 200,000-250,000 population • Crematorium – 1 per 150,000 populations; 2 ha site. Can be combined with Cemeteries	

3.14.3 Land Assembly Overlay General Description:

The Land Assembly Overlay is not a prescriptive regulation. It serves as indication for City One Stop Centre in identifying parts of the City that require particular attention when issuing construction permits or evaluating development proposals. Most of the land in Rwanda are under private ownership. The lack of government owned land has caused tremendous burden on the City to provide even the basic urban infrastructure such as roads, utilities and other public facilities and open recreational spaces. The lands in some parts of the city are highly fragmented and not suitable for planned development. The City also faces social challenges attached to the acquisitions and the subsequent relocation issues.

Allowing construction in this areas without a preliminary site assessment, would consolidate current land haphazard structure, hindering the possibility for organized development and affecting the possibility to provide for affordable housing solutions and basic services and facilities. It would also limit the possibility for plots with no direct access to roads to obtain a construction permit or to develop in a legal way, hence contributing to illegal and / or low density, scattered development.

It is recommended that Cities should take the lead to assemble land for development through a participatory land readjustment or assisted land pooling approach, where feasible. These approaches shall help achieving desired planning and development outcome for a particular area, ensure minimum cost implications to the City and make the landowners partners in the development process.

Participatory land readjustment/ Land Pooling approach shall involve pooling all land parcels of the project area and planning as one unit. An agreed proportion/percentage of land shall be redistributed to the original landowners after deducting land required for roads and other required infrastructure, reserve land and public Eco-Tourism and Open Space (ET), etc. Each landowner shall get back a plot that is smaller than the original area, but with enhanced value as a serviced plot.

This regulation may apply to:

All Zones in the CoK or District and in particular to all areas covered under Land Assembly Overlay, which includes:

- *Areas of urban expansion/green field sites.*
- *Redevelopment /renewal of prime areas e.g. along Public Transit Corridors located near City centre.*
- *Unplanned settlements or areas deprived of development due to the lack of basic physical and social infrastructures like road, drainage etc.*

Table 37: Land Assembly Overlay

REGULATION

Land Pooling /Land Readjustment process	Remarks
The District may take the lead to encourage and assist with the land pooling/readjustment process to assemble land for development. For those areas covered under the overlay, District may at its discretion earmark manageable sizes of units/clusters for land pooling project. The following process may be followed for generic land pooling / land readjustment projects:	Enabling policies/laws will be required to facilitate the process. Existing and related rules and legislation may be referred as legal basis
Regulation	
• Legal status of the land and ownership details shall be checked - Accurate and latest cadastral and land ownership details shall be used to fast track the planning process. • The project team shall be identified to manage the project and feasibility study conducted to check the viability of the scheme. • Stakeholder mapping shall be conducted at this stage, to involve/engage the stakeholders for better understanding and easy buy-in. Stakeholders may include landowners/holders, tenants, disadvantages groups, community organizations, local services, and businesses, as well as key actors from outside the Community • Initial presentation to the stakeholders shall be conducted to listen to their feedback, challenges, aspiration, and way forward. The stakeholders mapping (if any, in addition to the stakeholders engaged during the initial presentation) shall be completed. Any missing land information or other data shall be gathered from the stakeholders, in a participatory process, where they can be involved in designing, gathering, and analyzing the information. • The project team in close consultation with the stakeholders, shall develop a draft plan, including the amount of land contribution to be made by the land owners along with the financial plan. • The Draft plan shall be presented, deliberated, negotiated, and revised several times, until the stakeholder's consensus is sought, for smooth implementation.	

• The Final Plan shall then be presented to the district council for their approval. • Short-term loan or any other financial mechanism planned shall be mobilized for working capital; engineering designs for infrastructure shall be prepared. • Once the approval is sought, demarcation of plots and roads etc. shall be carried out and landowners shown their new plot boundaries. • Landowners shall be presented with the new registration certificates for their new plots and released for development or for selling. • Reserved plots (if/where applicable) shall be sold to finance infrastructure development.	
Single Owned Parcellation Plan Initiative	Remarks
• Districts may at its discretion, assess and approve only those construction applications that includes a parcellation plan, for the entire unit/cluster identified for land pooling/consolidation. • In such a case, Districts shall provide all facilitation and technical support to the developers, such as providing accurate and latest cadastral and land ownership data, organizing, and facilitating stakeholder meetings and any other technical support, that may be deemed required by the developers. • Parcellation plan shall indicate road access connecting all parcels, and Eco-Tourism and Open Space (ET), for the use of the community. • Districts shall verify the parcellation plan through ground verification and stakeholder engagement before the construction permit is issued to the applicant/developer. • If at least 70% of land owners in the identified cluster agree with the proposed parcellation plan, such parcellation plan shall be considered approved and all land owner in the cluster shall comply and collaborate to the new land structure implementation.	This shall be an interim arrangement for those units/clusters where land pooling/readjustment process is yet to be commenced.

3.14.4 Approved Land Subdivision Plans / Physical Plans Overlay

Land Subdivision Plans (LSP) are implementing tools of the Zoning Maps and Regulations and shall be drafted in conformity with them. The Approved Land Subdivision / Physical Plan Overlay is not a prescriptive regulation. It identifies parts of the City where Land Subdivision Plans have been approved and detailed planning is already available.

Subdivision Plans are detailed plans of smaller blocks of the land areas covered by the Master Plan. During the subdivision process, land is divided into convenient blocks for detailed layout. Land subdivision Plans contains detailed information regarding parcels' layout, local road network and established location and size of public facilities and amenities. Districts and the City of Kigali must involve relevant expertise and appropriate equipment / tools to develop the Land Subdivision Plans / Physical Plans meeting the requirement standards.

Table 38: Approved Land Subdivision Plans Overlay

Regulation	
This regulation may apply to: All areas where Land Subdivision Plans / Physical Plans have been approved by competent organs.	
Update of Approved Land Subdivision Plans Overlay Layer in CoK and Districts LUPs	Remarks
Once the Land Subdivision Plan is approved, it is the duty of District OSC to incorporate the boundaries and the detailed layout of the approved LSP into the MP database in the relevant layer. All subsequent developments in the area shall follow the approved LSP. LSP shall indicate the specific locations of all Public Facilities.	

3.14.5 Local Sectoral Development Master Plan Overlay

The key areas in the district or CoK, identified by one of the biggest sector land consumer (Tourism, Agriculture, Transportation, Mining, Urbanization, Industrialization, forestry, water and environment. etc.) for detailed design plans to achieve the strategic direction, and programs. These special areas are identified as Local Sectoral Development Master Plan Overlay Plan. Nonetheless, they must adhere to the size allocated in the Land Use Master Plan for that specific sector of land consumers and cannot extend beyond that designated zone.

The development of the areas which fall within the Local Sectoral Development Master Plan Overlay should respect their specific guidelines as per described by their Reports. However, their specific guidelines, shall complement and supersede the zoning guidelines.

This regulation applies to:

- All areas, where the Local Sectoral Development Master Plan have been approved by competent organs
- The implementation of Local Sectoral Development Master Plan has to comply with zoning regulations for that area

- The boundary of Local Sectoral Development Master Plan, must not reach beyond the size allocated to that landuse-sector, in the Land Use Master Plan

3.14.6 Urban Design Overlay

The key areas in the Cities (CBDs) have been identified for detailed urban design plans to achieve the desired identity and character. These special areas are identified in the Urban Design Overlay Plan. The guidelines for the urban design areas shall complement and supersede the zoning guidelines. The areas which fall within the urban design overlay should refer to the urban design plan & guidelines for the specific areas in each Urban Design Report.

3.14.7 Airport Restriction Area Overlay

The Airport Restriction Area overlay shall be provided, verified and updated by Rwanda Civil Aviation Authority which is responsible for verifying building height and uses in accordance to its jurisdiction and in collaboration with OSCs.

3.14.8 Slope (30-35%) Overlay

A large part of Rwanda has steep slopes and development on steep slopes above 30% is generally restricted for safety and protection of nature and environment from possible catastrophic disaster. However, the Zoning Plan recognizes that there are existing developments on slopes above 30%, and some of the areas amid slopes between 30-55% maybe allowed for development, subject to detailed investigation and mitigation works. District shall ensure and enforce this Slope Overlay guidelines to deal with such developments.

This regulation is applicable for areas falling in the Slope Overlay zone and are subject to conditional development on meeting the necessary regulations and conditions.

The purpose of this regulations is:

- To protect the natural environment, its ecosystems and biodiversity
- To provide flexibility and protect the development from hazardous conditions;
- To establish objectives for the form and character of development;
- To promote the safe and wise use of the slopes in the District.

The details of the affected parcels can be found in the GIS layers.

Table 39: Slope (30-50%) Overlay

Regulation
These regulations shall apply to: • Existing settlements falling in areas within the 30-55% Slope Overlay • Greenfield sites falling in areas within the 30-55% Slope Overlay

Conditions	Remarks
District, in coordination with relevant agencies, shall regulate the development on 30-55% slopes, identified in the overlay plan. Existing or proposed developments on areas falling within the Slope (30-55%) overlay are subject to detailed investigation and assessment by the District in collaboration with relevant agencies, where required. Existing Settlements Existing, legally authorised settlements in 30-55% Slope Overlay may be preserved and/or upgraded and current land uses retained provided that geotechnical assessment has been conducted and reassurance has been provided about the following: • No natural disaster risk is present, or any risk has been mitigated with appropriate resiliency measures. • The settlement is not causing environmental pollution downstream and all measures have been taken to minimize environmental impact. • Structures are built taking into consideration the topographic and the geological nature of the site. • Any additional structure or any renovation work shall be authorized only after the above conditions are met. • Areas that do not meet safety requirements or are considered extremely risky, after specific geotechnical survey has been conducted, shall be considered as priority sites for population relocation procedures.	
Regulation	
Greenfield Sites Development on slopes is generally discouraged, however, limited development may be conditionally authorized only by District OSC within the Slope Overlay, provided that the proposed development meets the following requirements: • The development does not fall in the Natural Disaster Risk Overlay zone. In such cases, only the uses allowed in that overlay will be authorized. • The proposed development is designed following the highest environmental standards and has obtained clearance after an EIA procedure has been conducted; • It has a strategic tourism and/or economic value and demonstrate substantial benefits to the community in terms of job creation, nature area restoration, women or disabled inclusion or other benefit to be evaluated by District OSC. District at its discretion and upon evaluation may allow developments as per Agriculture, Forest, Afforestation, Eco-Tourism and Open Space (ET) and Recreational regulations.	

N.B. Districts' OSC are not entitled to authorize any development on slopes above 30% under any circumstances.	
--	--

3.14.9 Nature Restoration Overlay

Restoration of nature across certain areas of the city which fall under other zoning regulations with permitted development uses shall rely on Nature Restoration Zone Overlay. This Overlay includes all identified nature restoration areas of the city. The Master Plan advocates protection of environmental sensitive areas and mainstreaming disaster risk reductions in the development process. Thus, the intent of this is to provide more discretion and flexibility by allowing the City to protect certain areas as well as encourage or discourage certain types of development that may impact important nature resources dispersed across the city, especially remnants of native forest.

Table 40: Nature Restoration Zone Overlay

Regulation	Remarks
These regulations shall apply to: - All areas identified under Nature Restoration Zone Overlay. Areas falling within the Nature Restoration Overlay are subject to conditional development upon OSCs's assessment in collaboration with relevant agencies. The purpose of this regulation is: - To utilize the natural environment in a sustainable manner - To protect the development from hazardous conditions; - To regulate the form and character of development	
Conditions	Remarks
- OSCs in coordination with relevant Agencies, shall regulate the restoration of nature, identified in the overlay plan. - OSCs at its discretion and upon evaluation may allow developments as per general Zoning Map (Residential, Mixed Use, etc) or other developments such as eco resorts, camping sites and other amenities that may be deemed required for ecotourism. - Nature restoration should be implemented in CoK and Districts in line with existing regulatory framework and the strategies, guidelines, and best management practices. - OSCs shall ensure Integration of afforestation and landscaping into every parcel falling under this overlay to ensure that, while allowing some degree of development, the overall design of the site respects, promotes and protects its forest component.	Refer Nature Restoration Overlay Plan

• All plots under this overlay shall protect significant clusters of trees and vegetation to preserve environmental value, maintain soil stability and preserve riparian corridors. Additional tree planting on-site is encouraged. • CoK or District may at its discretion provide certain bonuses or incentives to the developers to encourage nature restoration. • Public participation in the planning and decision-making processes shall be encouraged to achieve sustainable nature restoration. Development Approval Information: The following information is required when developing on a sloped area between 30% and 55% falling in Nature Restoration Overlay, as part of subdivision/development approval process.	
Regulation	Remarks
• General Site Survey • Geotechnical Evaluation • Environmental Impact Assessment • Grading Plan that indicates feasibility for roads, driveways and building envelop (that avoids massive manipulation of the site). • Existing & Proposed Tree and Vegetation plan. • Drainage Management Plan. • Erosion Control Plan	

3.14.10 Buffers Overlay

Buffers overlay are provided for various purposes to protect or control development in certain parts of the City / Districts. In the city / District, buffers overlay is provided along wetlands, waterbodies such as rivers, lakes and streams, and along high-tension power lines and natural drainage. Wetlands buffer have many functions, including erosion control, pollutant removal, diversity of wildlife habitat, flood water storage, groundwater recharge, and increased aesthetic value.

Likewise, riparian buffers along water bodies (streams, rivers, and lakes) maintain the hydrological and ecological connectivity between the water bodies and adjacent floodplains or uplands. Buffers along natural drainage corridors ensure that no encroachment is present in areas potentially subject to natural hazard or that existing settlements are subject to detailed risk assessment before any further development is allowed. Therefore, the intent of the wetlands, rivers, lakes buffers is for the protection from haphazard development, for preserving the natural habitat and benefits of riparian ecosystems, and for disaster risk reduction of such areas.

The buffer overlay for power lines are established to identify those areas of the City where no habitable developments shall be allowed for protection from electrical and health hazard to the communities.

Table 41: Buffers Overlay

	Regulation	Remarks
These regulations shall apply to: • All identified buffers along wetlands • All identified buffers along rivers, lakes, and streams. • All identified buffers along high tension power lines. • All provisional buffers for natural drainage		
Conditions		
Wetland Buffers • A buffer of 20m shall be maintained along wetlands in CoK and Districts. Uses allowed in the CoK and Districts Wetland Buffer are detailed in the CoK and Districts Urban Wetland Master Plan. • Planning permit/approval from District, MoE, Minagri or any other relevant Authority shall be required for the use, restoration, and development on buffer areas. The District in coordination with relevant stakeholder agencies shall assess the intent/importance of the development proposal for approval. • District upon evaluation and in consultation with relevant stakeholders may allow developments such as walking and biking trails for recreational use, agriculture, and development of certain amenities that may be deemed required for eco-tourism, provided it is demonstrated that any disturbance to the buffer will be appropriately mitigated. • Some other types of developments like bridges, roads, utilities etc. may be exempted if it is demonstrated that there is no alternative placement and disturbance to the buffer zone will be appropriately mitigated. • District shall ensure the developments allowed on the buffer do not contribute to the pollution of the wetlands and its surrounding. Any development that takes place within the buffer overlays and in immediate surrounding shall happen in a manner that is appropriate to the environment and vistas of the surrounding areas. District in coordination with relevant stakeholders may facilitate TDR or offer incentive packages to motivate the property owners towards sustainable use, development, and restoration. Waterbody Buffers A buffer of 50m shall be maintained along lakes and 10m along rivers and stream.		

The use and development of the buffer area shall require approval from District. The district shall assess the application in coordination with relevant stakeholders. District upon evaluation and in collaboration with relevant stakeholders may allow recreational uses such as, waterfront promenade with boating /kayaking facilities, walking and biking trails and development of kiosks and amenities that may be deemed required for the community and tourism promotion, provided it is demonstrated that any disturbance to the buffer will be appropriately mitigated. Some other types of developments like bridges, roads, utilities etc. may be exempted if it is demonstrated that there is no alternative placement and disturbance to the buffer zone will be appropriately mitigated. District shall ensure protection of potential water supplies and existing aquifers and encourage only those uses that can be appropriately and safely located in and around waterbodies. No developments or uses allowed on the buffer shall contribute to the pollution of the waterbodies and its surrounding. Any development that takes place within the buffer overlays and in immediate surrounding shall happen in a manner that is appropriate to the environment and vistas of the surrounding areas. District in coordination with relevant stakeholders may facilitate TDR or offer incentive packages to motivate the property owners towards sustainable development and conservation.	
Power lines Buffers Power lines buffer of 25m for HV lines up to 110kV envisaged for study area and 12m for MV line up to 30kV shall be maintained for CoK and Districts. No habitable structures shall be allowed to be developed on the areas covered by this overlay. The buffer area maybe allowed for agriculture use (crop farming), for laying roads and non-habitable structures. No tall trees shall be allowed on the buffer that may possibly intersect with the power lines and cause hazard. Planning permit/approval from District shall be required for the use and development on powerlines buffer. The district in coordination with relevant stakeholder agencies shall assess the intent/importance of the development proposal for approval. In coordination and assessment with RURA, District may facilitate TDR or offer other incentive packages for the landowners such as including them in the land pooling schemes of nearby areas, where feasible. The powerline buffers shall be implemented in accordance with guidelines issued by Rwanda Utilities Regulatory Authority (RURA) (current version: GUIDELINES N°01/GL/EL-EWS/RURA/2015), with the	

demarcated right-of-way generally kept clear of unauthorized structures that could interfere with a power line operation. Natural Drainage Buffers Buffers along natural drainage corridors is to ensure that no encroachment is present in areas potentially subject to natural hazard, or that existing settlements are subject to detailed risk assessment before any further development is allowed. The buffers shall be assessed as per the following conditions: Provisional buffers of 7.5m, 10m and 20m are identified along main natural drainage corridors. Whilst specific regulations should be provided as an outcome of a detailed storm water management plan, such buffers are shown to highlight potential risks caused by illegal encroachment and to notify landowners about potential risk to which their property might be subject. All renovation or upgrading projects within such buffers should take into due consideration their proximity to the drainage channel and the potential risk. Once a detailed storm water management plan is conducted, District may take site specific actions to ensure the safety of the residents. Landfill Buffers A buffer of 200 m is established from all landfills.	
--	--

3.14.11 Natural Disaster Risk Overlay(O-B4)

There is currently no detailed information regarding Flood Hazard / High Risk areas in CoK and Districts and it is recommended to establish a clear mapping process to populate this database. District, in partnership with relevant agencies shall undertake this exercise as part of a comprehensive risk management plan, which should map potential natural hazards such as floods, landslides, earthquakes, etc.

The Natural Disaster Risk Overlay shall undergo through additional requirements to ensure that development that occurs within these area is compatible with the risk presented by the hazard.

Below regulations represent an indication of possible prescriptions to be followed once Hazard / High Risk Zone Overlay is established.

In case of overlaps between overlays (other than with Urban Design Overlay), Natural Disaster Risk Overlay regulations shall supersede all other regulations. When there is an overlap with Urban Design Overlay, the urban design regulations shall supersede.

Table 42: Natural Disaster Risk Overlay

Regulation
These regulations shall apply to Natural disaster risk zone overlays: • The master plan has provided a proper boundary for this overlay size and defined the appropriate land use. • Zoning planned in main land use within Disaster Risk zone-overlay will be maintained and permitted after evaluation and consultation with relevant stakeholders and institutions through a review panel. • Under this boundary, if the sign of high risk is present, the regulation for B4 will be implemented. • No encroachments shall be allowed on risk-way unless it is demonstrated through scientific study. • District in collaboration with relevant stakeholder shall ensure there is adequate public awareness on preparedness, prevention, and response through early warning systems for the community who are in this zone. • All new construction or improvement/renovation are constructed with disaster risk resistant materials to minimize impacts. • Planning permit/approval from District shall be required for the use and development on hazard zone overlay areas. District upon evaluation and in consultation with relevant stakeholders may allow developments that may be deemed necessary, provided it is demonstrated that any disturbance will be appropriately mitigated.

4.1 APPENDIX I: INDUSTRIAL LISTING

The following list has been compiled using the Customized International Standard Industrial Classification of all Economic Activities (ISIC Rev.4), NISR - The Rwanda Classification Manual, 2012 edition.

Modifications to the listing and to the categorization of the industry type can be made in agreement between the National Land Authority (NLA), the City of Kigali, Districts and the Ministry of Trade and Commerce (MINICOM).

4.1.1 I1 – Light industries

- Light industries are generally compatible to food industries.
- There shall be a buffer distance of at least 50m between a light industrial building and the nearest residential building.
- Factory shall not generate large quantities of trade effluent or solid waste.

LIST OF LIGHT INDUSTRIES

- Information technology service activities
- Specialized design activities; Photographic activities
- Retail trade, except of motor vehicles and motorcycles
- Repair of computers and peripheral equipment; Repair of communication equipment; Repair of furniture and home furnishings
- Publishing of books, periodicals, and other publishing activities; Motion picture, video and television program production, sound recording and music publishing activities.
- Repair of consumer electronics
- Repair of household appliances and home and garden equipment
- Manufacture and repair of watches and clocks (not involving spray-painting, electroplating, or galvanizing operations).
- Warehousing and storage.
- Manufacture of paper products without printing activities.
- Repair of footwear and leather goods
- Repair of furniture and home furnishings
- Washing and (dry-) cleaning of textile and textile products (Not elsewhere classified)
- Manufacture of measuring, testing, navigating and control equipment t (not involving the use of chemicals, inclusive of gaseous chemicals).

- Medical and dental practicing.
- Packaging activities.
- Research & Development involving small quantities of chemicals.
- Wholesale and retail trade and repair / garage of motor vehicles and motorcycles
- Manufacture of made-up textile goods (Not elsewhere classified)
- Manufacture of carpets, wood works, workshops, craft centers and other finishing products (Not elsewhere classified).
- Manufacture of footwear
- Manufacture of luggage, handbags and the like, saddlery and harness
- Manufacture of articles of hair
- Manufacture of games and toys
- Printing and service activities related to printing
- Printing and reproduction of recorded media
- Manufacture of plastic products not elsewhere classified.
- Manufacture of containers and boxes of paperboard.
- Manufacture of paper products also involving printing activities without pulping works or decolorising operations.

4.1.2 I2 – General industries

- There shall be a buffer distance of at least 500 m between a general industrial building and the nearest residential building.
- Factory shall install, operate, and maintain pollution control equipment to minimize air, water and noise pollution arising from its operations as specified by the national environmental authority.

LIST OF GENERAL INDUSTRIES

- Large Scale Manufacture of food products
- Blending of flavors.
- Manufacture of jewellery, bijouterie, and related articles
- Machining; treatment and coating of metals
- Manufacture of electrical apparatus and supplies not elsewhere classified.
- Manufacture of professional, scientific, measuring and controlling equipment, not elsewhere classified.
- Manufacture of musical instruments.

- Manufacture of sporting and athletic goods
- Manufacture of cutlery, hand tools and general hardware.
- Manufacture of medical and dental instruments and supplies
- Manufacture of soap and detergents, cleaning and polishing preparations, perfumes, and toilet preparations
- Large Scale Manufacture of made-up textile goods, with dyeing, bleaching and/or other finishing operations.
- Spinning, weaving, and finishing of textiles
- Manufacture of textiles not elsewhere classified.
- Tanning and dressing of leather; dressing and dyeing of fur
- Manufacture of furniture, those made primarily of metal
- Manufacture of builders' carpentry and joinery
- Manufacture of wooden containers.
- Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw, metal and plaiting materials.
- Manufacture of other products of wood; manufacture of articles of cork, straw, metal and plaiting materials
- Manufacture of other fabricated metal products; metalworking service activities
- Manufacture of other fabricated metal products.
- Manufacture of batteries and accumulators
- Cutting, shaping and finishing of stone
- Maintenance and repair of motor vehicles
- Repair of transport equipment, except motor vehicles
- Installation of industrial machinery and equipment
- Filling/bottling of inert industrial gases such as nitrogen, helium, and argon.
- Storage of chemicals, detergents, oils, solvents, pesticides, and related products.
- Storage of rubber products and other odorous products.
- Manufacturing industries not elsewhere classified.

4.1.3 Special industries

- There shall be a buffer distance of at least 500m between the boundaries of a factory and the nearest residential building.
- Special industries, which can potentially cause serious pollution such as oil refineries, petrochemical and chemical plants, toxic industrial wastes treatment facilities, etc., shall be sited at least 1 km from the nearest residential building.
- Factory shall install, operate, and maintain pollution control equipment to minimize air, water and noise pollution arising from its operations as specified by the national environmental authority.

LIST OF SPECIAL INDUSTRIES

- Processing and preserving meat, fish, crustaceans, and molluscs.
- Manufacture of dairy products.
- Canning and preserving of fruits and vegetables.
- Canning, preserving, and processing of fish, crustaceans, and similar food.
- Manufacture of vegetable and animal oils and fats.
- Manufacture of grain mill products, starches, and starch products.
- Manufacture of sugar, cocoa, chocolate, and sugar confectionery.
- Manufacture of macaroni, noodles, couscous, and similar farinaceous products
- Manufacture of prepared animal feed.
- Manufacture of prepared meals and dishes
- Manufacture of other food products n.e.c.
- Manufacture of wines and beverages.
- Manufacture of soft drinks; production of mineral waters and other bottled waters
- Manufacture of malt liquors and malt
- Distilling, rectifying, and blending of spirits; ethyl alcohol production from fermented materials
- Manufacture of pharmaceuticals, medicinal chemical and botanical products
- Others that are non-compatible to food industries and can be allowed if they are located 100m away
- Manufacture of paints, varnishes and similar coatings, printing ink and mastics
- Other manufacturing industries involving the use of large quantities of organic solvents.
- Manufacture of electronic components; Manufacture of computers and peripheral equipment; Manufacture of communication equipment; Manufacture of consumer electronics.

- Manufacture of electric motors, generators, transformers and electricity distribution and control apparatus.
- Manufacture of fiber optic cables; Manufacture of wiring devices
- Manufacture of other electronic and electric wires and cables
- Manufacture of optical instruments and equipment.
- Manufacture of magnetic and optical media
- Manufacture of watches and clocks involving electroplating or galvanizing operations.
- Manufacture of sporting and athletic goods involving woodworking or electroplating operations.
- Manufacture of irradiation, electromedical and electrotherapeutic equipment
- Other manufacturing industries with electroplating or galvanizing operations.
- Manufacture of furniture and fixtures that are primarily made of metal.
- Manufacture of basic iron and steel.
- Manufacture of structural metal products.
- Manufacture of tanks, reservoirs, and containers of metal
- Manufacture of steam generators, except central heating hot water boilers
- Manufacture of basic precious and other nonferrous metals.
- Casting of iron and steel; Casting of non-ferrous metals
- Machining; treatment and coating of metals
- Manufacture of fabricated metal products, except machinery and equipment, not elsewhere classified.
- Manufacture of engines and turbines, except aircraft, vehicle, and cycle engines
- Manufacture of gas; distribution of gaseous fuels through mains
- Tanning and dressing of leather; manufacture of luggage, handbags, saddlery, and harness; dressing and dyeing of fur
- Spinning, weaving, and finishing of textiles.
- Preparation and spinning of textile fibers
- Manufacture of pulp, paper, and paperboard; Manufacture of corrugated paper and paperboard and of containers of paper and paperboard; Manufacture of other articles of paper and paperboard
- Sawmilling and planning of wood
- Manufacture of veneer sheets; manufacture of plywood, laminboard, particle board and other panels and board
- Manufacture of basic chemicals, fertilizer and nitrogen compounds, plastics, and synthetic rubber in primary forms

- Manufacture of pesticides and other agrochemical products
- Manufacture of soap and detergents, cleaning and polishing preparations, perfumes, and toilet preparations
- Manufacture of refined petroleum products.
- Manufacture of plastics products and man-made fibers.
- Manufacture of coke oven products
- Manufacture of other chemical products.
- Manufacture of rubber tires and tubes; rethreading and rebuilding of rubber tires
- Manufacture of rubber products not elsewhere classified.
- Manufacture of glass and glass products.
- Manufacture of clay building materials.
- Manufacture of other porcelain and ceramic products
- Manufacture of cement, lime, and plaster.
- Manufacture of articles of concrete, cement, and plaster
- Manufacture of non-metallic mineral products.
- Manufacture of weapons and ammunition.
- Manufacture of railway locomotives and rolling stock
- Manufacture of motor vehicles, motorcycles, and bicycles.
- Manufacture of air and spacecraft and related machinery
- Manufacture of military fighting vehicles
- Manufacture of transport equipment.
- Manufacture of transport equipment not elsewhere classified.
- Manufacture of bodies (coachwork) for motor vehicles; manufacture of trailers and semi-trailers
- Manufacture of parts and accessories for motor vehicles and their engines
- Manufacture of special-purpose and general-purpose machinery
